SI NECESITA ESTA MISMA INFORMACION EN INGLES, USE LA OTRA PAGINA.

As we discussed last month, we need to do 4 PAPS at 6 month intervals, to PROVE that all is well.... See you in September.

COLPOSCOPY--ALL NORMAL AT THIS TIME

SUMMARY: Colposcopy or "Colpo" refers to the special examination that was done on your cervix. [The "CERVIX" is the very bottom part of the UTERUS (the womb)--where it meets the top of the vagina. The cervix is a small, thick tube (through which you menstruate, and through which babies are born).] The Colpo examination helps us detect any abnormal growths at an early stage, and treat them more effectively.

YOUR RESULTS: Within the limits of the tests we have, your Colpo reading was NORMAL, or NEAR-NORMAL. This is very reassuring, and a good sign. We made specific recommendations to you, as to when you should have other tests repeated in the future, in the clinic, to follow this up. Further (repeat) PAP smears are needed to make sure that we have not missed something that is small or just starting to grow!

Please, come back to the clinic, as we recommend to you each visit.

USUAL RECOMMENDATIONS: Our usual recommendation, in a case such as this, is for you to have repeat PAP smears every 6 months, for two years. That is a total of FOUR smears in the next 24 months. Again, the purpose of this is to make sure that we have not bypassed some problem that is small or just starting to grow. It is these repeat exams that PROVE that this Colpo was entirely reliable. They PROVE that you are not having any progression of the changes seen on the original PAP.

But if it turns out otherwise, you may need to have repeat Colpo examinations in the future.

PREVENTATIVE MEASURES: Many or most cervical cancers appear to be caused by a virus (the "HPV" or Human Papilloma Virus). This is a Sexually Transmitted Disease (STD). You can reduce your risks of cervical cancer by having only one sexual partner, and by always using condoms. [Unfortunately, you can get this infection by having unprotected intercourse even just once. Then, the infection can become chronic--and be a life-long problem.]

Recall w 1 month ahead?
