

The Intersection of Environmental Justice and Human Services

ENVIRONMENTAL INJUSTICE IN THE US

42 million

American homes suffer from **energy poverty**, making them vulnerable to intense heat and cold.¹

More than **2,000,000** Americans live without basic access to **safe drinking water and sanitation**.²

11.9 million

Americans, disproportionately people of color, are exposed to **unhealthy air pollution levels**.³

WHAT IS ENVIRONMENTAL JUSTICE?

When everyone enjoys the same degree of protection from environmental health hazards, and equal access to the decision-making process to have a healthy environment in which to live, learn, and work.⁴

WHY IT MATTERS TO HUMAN SERVICES

We serve communities increasingly affected by environmental and climate threats.

Our deep community roots offer a way to connect and learn what is most needed.

Human service programs are ready to partner with others to address environmental issues.

WHAT HUMAN SERVICES CAN DO

- Better understand the communities we serve: discussions and data
- Explore with human service programs and others ways to best incorporate environmental justice into our work
- Listen and attend to community priorities and needs
- Partner with other federal, Tribal, state, local and community entities to plan, protect, respond, and adapt
