Office of Disability, Aging and Long-Term Care Policy**

# **INTEGRATING CARE THROUGH DUAL ELIGIBLE SPECIAL NEEDS PLANS (D-SNPs):**

## **OPPORTUNITIES AND CHALLENGES**

**April 2019**

## **Office of the Assistant Secretary for Planning and Evaluation**

The Office of the Assistant Secretary for Planning and Evaluation (ASPE) is the principal advisor to the Secretary of the Department of Health and Human Services (HHS) on policy development issues, and is responsible for major activities in the areas of legislative and budget development, strategic planning, policy research and evaluation, and economic analysis.

ASPE develops or reviews issues from the viewpoint of the Secretary, providing a perspective that is broader in scope than the specific focus of the various operating agencies. ASPE also works closely with the HHS operating agencies. It assists these agencies in developing policies, and planning policy research, evaluation and data collection within broad HHS and administration initiatives. ASPE often serves a coordinating role for crosscutting policy and administrative activities.

ASPE plans and conducts evaluations and research--both in-house and through support of projects by external researchers--of current and proposed programs and topics of particular interest to the Secretary, the Administration and the Congress.

## **Office of Disability, Aging and Long-Term Care Policy**

The Office of Disability, Aging and Long-Term Care Policy (DALTCP), within ASPE, is responsible for the development, coordination, analysis, research and evaluation of HHS policies and programs which support the independence, health and long-term care of persons with disabilities--children, working aging adults, and older persons. DALTCP is also responsible for policy coordination and research to promote the economic and social well-being of the elderly.

In particular, DALTCP addresses policies concerning: nursing home and community-based services, informal caregiving, the integration of acute and long-term care, Medicare post-acute services and home care, managed care for people with disabilities, long-term rehabilitation services, children's disability, and linkages between employment and health policies. These activities are carried out through policy planning, policy and program analysis, regulatory reviews, formulation of legislative proposals, policy research, evaluation and data planning.

This report was prepared under contract #HHSP23320100021WI between HHS's ASPE/DALTCP and the Research Triangle Institute. For additional information about this subject, you can visit the DALTCP home page at <https://aspe.hhs.gov/office-disability-aging-and-long-term-care-policy-daltcp> or contact the ASPE Project Officer, Jhamirah Howard, at HHS/ASPE/DALTCP, Room 424E, H.H. Humphrey Building, 200 Independence Avenue, S.W., Washington, D.C. 20201. Her e-mail address is: [Jhamirah.Howard@hhs.gov](mailto:Jhamirah.Howard@hhs.gov).

## Acronyms

The following acronyms are mentioned in this report and/or appendices.

AHCCCS	Arizona Health Care Cost Containment System
CFR	Code of Federal Regulations
CHIP	Children’s Health Insurance Program
CMS	HHS Centers for Medicare & Medicaid Services
D-SNP	Dual Eligible Special Needs Plan
FIDE SNP	Fully Integrated Dual Eligible Special Needs Plan
GAO	U.S. Government Accountability Office
HHS	U.S. Department of Health and Human Services
HPMS	Health Plan Management System
LTSS	Long-Term Services and Supports
MA	Medicare Advantage
MACPAC	Medicaid and CHIP Payment and Access Commission
MedPAC	Medicare Payment Advisory Commission
MIPPA	Medicare Improvements for Patients and Providers Act
MLTSS	Managed Long-Term Services and Supports
MMCO	CMS Medicare-Medicaid Coordination Office
NAMD	National Association of Medicaid Directors
PACE	Program of All-inclusive Care for the Elderly
SCO	Senior Care Options
SNP	Special Needs Plan

## Executive Summary

**Background and Objectives.** The 11 million individuals dual eligible for Medicare and Medicaid are among the highest need populations in either program. However, a lack of coordination between the Medicare and Medicaid programs makes it difficult for individuals enrolled in both to navigate these fragmented systems of care and adds to the cost of both programs.

Special Needs Plans (SNPs), created by Congress in 2003, are a type of Medicare Advantage (MA) plan that limit membership to people with specific diseases or characteristics. Dual Eligible Special Needs Plans (D-SNPs), one type of SNP, enroll only individuals dual eligible for Medicare and Medicaid. D-SNPs seek to provide enrollees with a coordinated Medicare and Medicaid benefit package. These plans first began operation in 2006, and their enrollment has increased steadily, but there is opportunity for further growth. As of 2013, all D-SNPs must have contracts with the applicable state Medicaid program that contains a description of how the plan will provide and coordinate Medicare and Medicaid-financed care.

States can use their D-SNP contracts to encourage or, in some cases require, these plans to *integrate* certain Medicare and Medicaid programmatic elements by blending the programs' disparate care management and administrative processes and policies into one unified delivery system. States can also work with their D-SNPs to improve the *alignment* of Medicare and Medicaid so that the programs work more seamlessly when administrative processes cannot be combined.

Although states' D-SNP contracts can help to promote integrated care for dual eligible beneficiaries, these plans continue to face administrative and operational challenges in overcoming Medicare-Medicaid misalignment. Recent initiatives within the U.S. Department of Health and Human Services (HHS) Centers for Medicare & Medicaid Services (CMS) have made progress in addressing misalignment, but challenges remain. Despite these challenges, D-SNPs may still be the most readily available and scalable platform to integrate care for dual eligible beneficiaries. The purpose of this report is to identify policy options for consideration by policymakers for enhancing D-SNPs as a platform to integrate care for this population. *These policy options are not recommendations and comprehensive pros and cons are not presented.*

**Methods.** This study gathered information from a variety of sources, including: (1) an environmental scan of peer-reviewed and "gray" literature and other public documents; (2) telephone interviews with five subject matter experts; (3) telephone case studies of five states (Arizona, Massachusetts, Minnesota, New Jersey, and Tennessee) that are advancing D-SNP-based integration models; and (4) a meeting in Washington, DC, of officials from Arizona, Massachusetts, Minnesota, New Jersey, New Mexico, Pennsylvania, Tennessee, Texas, Virginia, and Wisconsin, all states which are building or refining integration models based on D-SNPs.

This information was used to develop a list of: (a) federal policy options, including administrative flexibilities, that could be adopted by HHS; and (b) state policy options that could be used to improve integration and coordination of care under existing authority.

**Findings.** Findings drawn from the study include the following:

- **Delivery System Reform for Dual Eligible Beneficiaries:** Given dual eligible beneficiaries' complex clinical, functional, and social profiles and very low incomes, state officials report that this population needs a different level of services and supports than the general Medicare beneficiary population. Ideally, states would like D-SNP-based integrated care programs to be treated as a new delivery system, distinct from MA, with its own policies and procedures specially tailored to the needs of dual eligible individuals. Short of creating a new delivery system, states would like CMS to consider how the guidance provided for the administration and oversight of MA plans can better serve the needs of D-SNPs.
- **Medicaid Parity with Medicare:** In many instances, state officials believe that Medicaid program goals and requirements are placed at a lower priority than those of the Medicare program when federal policies and programs related to integrated care are being developed. Although states appreciate the opportunity to comment on rules and other guidance written by CMS related to dual eligible populations--such as the recently created Integrated Denial Notice and Summary of Benefits notice--they would like to more actively participate with CMS on policies that directly affect their dual eligible beneficiaries.
- **Priority Issues for Administrative Alignment:** State officials identified two priority issues for improving Medicare and Medicaid administrative alignment: *care management* and *network standards*. They believe that care management of Medicare and Medicaid services is the cornerstone of integrated care, and that challenges in coordinating MA's D-SNP care management requirements--embodied in the Model of Care developed by each plan--with the care management requirements of their managed long-term services and supports programs create a significant barrier to alignment. For example, states want to require D-SNPs' Models of Care to include descriptions of how the plans will conduct assessments of enrollees' long-term services and supports (LTSS) needs and develop integrated Medicare-Medicaid care plans, but CMS auditors have questioned the appropriateness of including such elements in the Model of Care.

Currently, CMS's network adequacy standards treat all MA plans similarly regardless of the population enrolled. States and plans both emphasized that MA network adequacy standards do not account for: (1) specific state geographic characteristics that can affect provider availability; and (2) the ability of D-SNPs to expand access to care by combining MA networks with state Medicaid service offerings, such as non-emergency transportation benefits, which may enhance access. Although D-SNPs may submit network exception requests to CMS to address geographic barriers, states believe that current MA network adequacy standards limit health plan participation and beneficiary enrollment. Although all stakeholders agree that dual eligible are a high-risk population needing extensive services and better access than offered by typical MA plans, some observers are concerned that modifying the network adequacy standards to give more exceptions to D-SNPs could result in approval of plans with insufficient provider networks. They would prefer that any problems with the MA standards, such as inadequate recognition of geography, be resolved for all beneficiaries.

- **Priority Issue for Increasing D-SNP Enrollment: Seamless Conversion.** Although CMS prohibits mandatory enrollment in MA plans, it had, under narrow circumstances, allowed approved plans to “seamlessly convert” (i.e., passively enroll) Medicare individuals enrolled in a plan’s non-Medicare products (e.g., commercial or Medicaid plans) into its MA plans (including D-SNPs) as the beneficiary becomes newly eligible for Medicare (i.e., turning age 65 or completing the 2-year Social Security Disability Insurance waiting period). Beneficiaries enrolled in this manner must be given written notice at least 60 days prior to the effective date of their Medicare coverage and may opt out at any time before coverage begins.

In October 2016, following inquiries about how plans are using this mechanism and related beneficiary protections, CMS placed a temporary moratorium on new plan approvals for seamless conversion while it reviews current policies, although already-approved plans may continue. State officials believe this moratorium hinders integrated care; they see seamless conversion not just as a mechanism to increase D-SNP enrollment but as an opportunity to improve care management because one entity becomes responsible for coordination of both Medicare and Medicaid services. The states asked for D-SNPs to be excluded from the moratorium because enrollment in aligned plans that otherwise meet CMS quality and other performance standards affords beneficiaries more protections by providing better care management and reduced fragmentation of care. However, some stakeholders may view seamless conversion, along with other policies that passively enroll beneficiaries into a health plan, as an infringement on beneficiary protections, even if the individual has an opportunity to refuse enrollment beforehand and opt out any time thereafter.

- **State Commitment to Integrated Care:** State officials strongly support integrated care for their dual eligible populations; however, their ability to implement these programs is constrained by limited resources. Competing priorities often mean that important tasks such as analysis of utilization from plan encounter data or stakeholder engagement work have lower priority than other Medicaid delivery system reform efforts. They requested more financial and other support for their integration efforts.
- **Legislative, Regulatory, or Systems Change Will Be Needed:** CMS staff have been working within existing authorities to remove Medicare-Medicaid misalignments. However, many potential solutions (e.g., integrated appeals processes, changes in the notification process for benefit denials) cannot be made without legislative, regulatory, or systems changes.
- **Role of CMS Technical Assistance:** States requested that CMS provide more technical assistance tools detailing steps that states could take to strengthen their integration efforts via D-SNP-based programs. They suggested that these materials be tailored to states at varying stages of design and implementation of integrated care programs.

*The policy options presented in this report represent findings from the literature, discussions with subject matter experts, and a roundtable of state health officials. The policy options presented are NOT recommendations or official statements of HHS policy positions.*

**Policy Options.** We identified specific policy options that could be adopted by HHS or states. *Appendix A* contains a complete list of all the policy options identified. Policy options that states considered particularly important include the following:

- **HHS** could work with states to develop D-SNP-specific network adequacy standards.
- **HHS** could promote greater integration of the Medicare Model of Care requirements with state Medicaid care management requirements.
- **States** could modify Medicaid managed care marketing criteria to align with MA practices.
- **States** could conduct more beneficiary education and outreach activities.
- **HHS** could develop more integrated beneficiary and provider materials to be used by D-SNPs.
- **States** could provide D-SNPs with data on beneficiaries' service utilization history.
- **HHS** could change the notification process around benefit denials for beneficiaries enrolled in aligned plans.
- **HHS** could lift the temporary moratorium on new approvals for seamless conversion submitted by D-SNPs.
- **States** could align their Medicaid annual open enrollment period with the MA open enrollment period.
- **HHS** could provide more guidance around the Fully Integrated Dual Eligible Special Needs Plan (FIDE SNP) and highly integrated D-SNP designations.
- **HHS** could explore ways to make the frailty payment adjuster for FIDE SNPs available at the beneficiary level rather than the plan level.
- **HHS** could offer states with integrated D-SNP programs the opportunity for joint CMS/state oversight calls.

**Considerations.** The policy options listed in this report may help HHS and states advance Medicare-Medicaid integration for dual eligible beneficiaries through D-SNPs. Nonetheless, there are several overarching issues regarding D-SNPs that should be considered in assessing these policy options. To date, there has been little comparative outcomes data showing that D-SNPs deliver better care for dual eligible beneficiaries than either regular MA plans or the uncoordinated Medicare and Medicaid fee-for-service delivery systems. Both states and health plans will need to demonstrate the value of D-SNP-based integrated care programs to both beneficiaries and providers to secure their participation. In addition, D-SNPs may not be able to or interested in serving rural areas because of the lack of enrollees or providers. Finally, the lack of access to Medicare savings resulting from the improved care coordination provided by D-SNP or other integrated care programs may limit state interest in investing in these programs.

**Conclusion.** D-SNP-based integrated care programs have the potential to provide the full array of Medicare and Medicaid services under one entity, improve care management, and address

some administrative barriers faced by dual eligible beneficiaries. These advantages have allowed D-SNPs to grow in both numbers and enrollment. States, plans, and the Federal Government have worked to overcome Medicare-Medicaid misalignments that have impeded the ability of D-SNPs to become a fully integrated vehicle for serving dual eligible beneficiaries. Many states see D-SNPs as having the potential to improve the care of dual eligible individuals. States remain eager to work with health plans and federal partners to make D-SNP-based integrated care a more important option for this vulnerable population.

# 1. Introduction

The 11 million people dual eligible for Medicare and Medicaid are among the highest cost enrollees in either program, and many have physical health, behavioral health, and long-term services and supports (LTSS) needs (Centers for Medicare & Medicaid Services Medicare-Medicaid Coordination Office [CMS MMCO], 2016a; Medicare Payment Advisory Commission and Medicaid and CHIP Payment and Access Commission [MedPAC-MACPAC], 2017; CMS, 2014a). However, the lack of coordination between Medicare and Medicaid has made it difficult for dual eligible individuals to receive needed care and has also increased program costs.

Over time, a variety of mechanisms have been created to foster Medicare-Medicaid *integration*--the blending of the programs' disparate care management and administrative processes and policies into unified program elements. Other efforts have tried to improve the *alignment* of Medicare and Medicaid to make processes and policies work more seamlessly in areas where they cannot be combined. A few programs attempt to create an integrated system of care at the program and delivery systems level. For example, the Program of All-Inclusive Care for the Elderly (PACE) completely integrates Medicare and Medicaid benefits and financing in a geriatric care model built on an adult day health platform (National PACE Association, 2016). More recently, the Financial Alignment Initiative demonstrations, in 12 states across the country, are testing capitated and managed fee-for-service approaches to providing integrated care (Chepaitis et al., 2015). However, these two approaches have their limitations. Enrollment in PACE has grown slowly, reflecting some of the limitations of the model (Gross et al., 2004).<sup>1</sup> In addition, not all states were able to take part in the Financial Alignment Initiative demonstrations, and it is uncertain whether this model will become a permanent part of the Medicare and Medicaid programs.

Other more-scalable and permanent options are needed to integrate care for dual eligible beneficiaries. Because of their presence in most states, Dual Eligible Special Needs Plans (D-SNPs), a type of Medicare Advantage (MA) managed care plan, are a readily available platform for increasing the number of people in integrated care and better aligning Medicare and Medicaid policies. D-SNPs enroll only individuals dual eligible for Medicare and Medicaid; are required to have an approved care management model describing how each plan will meet the needs of its enrollees; and arrange for or provide enrollees with a coordinated Medicare and Medicaid benefit package (CMS, 2016b).<sup>2</sup>

When they were first authorized by Congress in the Medicare Modernization Act of 2003, D-SNPs were not required to have any formal relationship with state Medicaid agencies. However, to facilitate coordination of Medicare and Medicaid services, the Medicare Improvements for Patients and Providers Act (MIPPA) of 2008--as amended by the Patient Protection and Affordable Care Act--required all D-SNPs to have contracts with the states in which they operate (CMS, 2016b). Now, at a minimum, D-SNPs must either: (1) include

---

<sup>1</sup> Although PACE enrollment was low for many years, it has grown by more than 60 percent since 2011 (CMS, 2016a).

<sup>2</sup> Dual eligible beneficiaries may enroll in other types of MA plans in addition to D-SNPs.

Medicaid benefits in their capitated benefit package; or (2) arrange for Medicaid benefits to be provided in some other way such as through a companion Medicaid managed long-term services and supports (MLTSS) program, a Medicaid managed care plan, or through Medicaid fee-for-service providers, depending on the state. D-SNPs have the potential to deliver a coordinated Medicare and Medicaid benefit package that offers more integrated care than regular MA plans or traditional Medicare fee-for-service.

As an integration platform, D-SNPs differ in several ways from the Medicare-Medicaid Plans used in the Financial Alignment Initiative demonstrations. First, the special authority of the demonstrations offers Medicare-Medicaid Plans the opportunity to fully integrate administrative processes including marketing, beneficiary notices, grievances and appeals, and quality measurement. D-SNPs do not have the same opportunity to overcome misalignments in Medicare and Medicaid administrative processes. Medicare-Medicaid Plans receive capitated payments from Medicare and Medicaid. D-SNPs receive capitated payments from Medicare, but only a small subset of these plans that provide some level of Medicaid benefits receive Medicaid capitation, which creates a financial barrier to integration. Finally, the degree of Medicare-Medicaid integration attained through D-SNPs is dictated by the goals and priorities of the states in which they operate.

Through several initiatives over the last few years, the U.S. Department of Health and Human Services (HHS) Centers for Medicare & Medicaid Services (CMS) has made progress in addressing many of the misalignments between Medicare and Medicaid (CMS, 2011; CMS MMCO, 2016a). However, many misalignments remain and must be overcome before the D-SNP platform can be used more widely in a fully integrated manner. The purpose of this report is to identify policy options that would advance the use of D-SNPs as an integration platform by: (1) resolving misalignments in Medicare and Medicaid processes and procedures; (2) encouraging both states and health plans to invest in D-SNP-based integration models; and (3) facilitating collaboration between states and CMS. ***The policy options presented in this report are NOT recommendations or official statements of HHS policy positions.***

## 2. Methods

We gathered information from a variety of sources on the use of D-SNPs as an integration platform:

- **Environmental scan.** An environmental scan examined both peer-reviewed and “gray” literature and other public documents related to: (1) D-SNP structures and operations; (2) state-level progress with and challenges of using D-SNPs to serve dual eligible populations; and (3) trends in D-SNP markets. A major purpose of the environmental scan was to generate topics for discussion with subject matter experts, case study participants, and state officials.
- **Subject matter expert interviews.** For a detailed, up-to-date understanding of issues and options related to the use of D-SNPs as a platform for Medicare-Medicaid integration, the project team conducted five telephone interviews with subject matter experts. (See *Appendix B* for a list of experts interviewed.) The hour-long interviews covered a wide range of topics, with questions targeted to the interviewees’ areas of expertise.
- **State case studies.** Building on the information gathered from the environmental scan and interviews with subject matter experts, we conducted case studies of five states (Arizona, Massachusetts, Minnesota, New Jersey, and Tennessee), which are all actively using D-SNP-based integration models. In each state, the project team spoke with state staff responsible for program design and ongoing contract management and representatives from D-SNPs operating in that state. (See *Appendix B* for a list of state agencies and D-SNPs interviewed.) The objectives of the case studies were to: (1) identify states’ accomplishments using the D-SNP platform to achieve Medicare-Medicaid integration and alignment; (2) understand how they made those accomplishments; and (3) determine what policy changes would help them to further their innovations. Information gleaned from the case studies is included in exhibits throughout this report.
- **Meeting of state officials.** Finally, we convened a meeting of officials from ten states (Arizona, Massachusetts, Minnesota, New Jersey, New Mexico, Pennsylvania, Tennessee, Texas, Virginia, and Wisconsin), all of which are building or refining integration models based on D-SNPs. (See *Appendix B* for a list of state officials attending the meeting.) The meeting was held at the Hubert H. Humphrey Building in Washington, D.C., on October 24, 2016. The goal of the meeting was to review a series of policy options that emerged from the literature review, interviews with subject matter experts, and the state case studies. Through facilitated discussion, the state representatives assessed the proposed policy options and provided insights based on their own experiences.

The information gathered from these four activities was used to develop:

- Federal policy options, including administrative flexibilities, that are available to HHS.
- State options under existing authority that could improve integration and coordination of care.

This report presents these options for consideration by policymakers and describes how they could help states and health plans to make D-SNPs a more robust platform to integrate care for dual eligible individuals.

The body of the report lists the top 12 policy options which could have the greatest impact on encouraging: (1) growth in D-SNP enrollment; (2) expansion of D-SNPs into more service areas; and (3) strengthened contracts between states and D-SNPs to provide more integrated and aligned care. The options are not recommendations. *Appendix C* lists additional policy options identified through this project that could be considered by states and HHS to improve integration or alignment in the D-SNP platform.

### 3. Overview of the D-SNP Landscape

The D-SNP landscape can be viewed from a variety of perspectives, including the number of dual eligible beneficiaries these plans enroll, their service areas, and the degree of Medicare-Medicaid integration required in the contracts that they have with states.

#### 3.1. D-SNP Enrollment and Service Areas

Since D-SNPs first began operation in 2006, the number of enrollees has grown steadily (Verdier et al., 2016). In 2006, there were 256 D-SNPs with 491,877 enrollees; as of February 2017, there were 378 D-SNPs with 1,922,183 enrollees--about 20 percent of the total dual eligible population (CMS, 2017a; Milligan & Woodcock, 2008). Although 41 states, the District of Columbia, and Puerto Rico have D-SNPs, enrollment is highly concentrated: 63 percent of enrollment is in ten states (Alabama, Arizona, California, Florida, Georgia, Massachusetts, New York, Pennsylvania, Tennessee, and Texas) (Verdier et al., 2016).<sup>3</sup> *Exhibit 1* shows the percentage of the dual eligible population enrolled in D-SNPs in each state.

<sup>3</sup> Another 15 percent of D-SNP enrollment is in Puerto Rico (CMS, 2017a), but the Commonwealth’s MA plans, including D-SNPs, operate under modified payment rules that potentially make these products more attractive for insurers to offer. Almost all dual eligible beneficiaries in Puerto Rico are enrolled in D-SNPs, and about one-third of Medicare beneficiaries in Puerto Rico are dual eligibles for Medicare and Medicaid (Gold et al., 2011).

The total number of D-SNPs has been stable from year to year (Verdier et al., 2016). For 2017, there are 29 new D-SNPs and 15 D-SNPs departing their markets (Integrated Care Resource Center, 2016a). Kansas, Nebraska, and Rhode Island did not have any D-SNPs in 2016, but one plan is available in each state in 2017. Idaho's one D-SNP experienced a significant service area reduction between 2016 and 2017 that has decreased its enrollment by 8 percent (Integrated Care Resource Center, 2016a).

The growth of enrollment in D-SNP-based integration models is influenced by both state and health plan interest in this integration platform. The nine states that have no D-SNPs in 2017 (Alaska, Iowa, Nevada, New Hampshire, North Dakota, Oklahoma, South Dakota, Vermont, and Wyoming) all have MA organizations that could potentially choose to offer D-SNPs. In still other states, there are a significant number of counties or other service areas with no D-SNPs--markets into which these plans could potentially expand.

### **3.2. D-SNP Contracting with States**

To improve the integration of Medicare and Medicaid benefits, MIPPA--as amended by the Affordable Care Act--required all D-SNPs to have contracts with the states in which they operate, effective January 1, 2013 (CMS, 2016b). These State Medicaid Agency Contracts, also called "MIPPA contracts," require D-SNPs to provide Medicaid benefits, or arrange for benefits to be provided, and serve and coordinate care for dual eligible enrollees (Verdier et al., 2016). At a minimum, D-SNP MIPPA contracts with states must document eight elements (42 CFR §422.107):

1. The D-SNP's responsibility, including financial obligations, to provide or arrange for Medicaid benefits.
2. The categories of eligibility for dual eligible beneficiaries to be enrolled under the Special Needs Plan (SNP) (full Medicaid, Qualified Medicare Beneficiaries, Specified Low-Income Medicare Beneficiaries, etc.).
3. The Medicaid benefits covered under the SNP.
4. The cost-sharing protections covered under the SNP.
5. The process by which the state will identify and share with the SNP information on providers contacted with the state Medicaid agency.
6. The process by which the SNP will receive real-time information to verify enrollees' eligibility for both Medicare and Medicaid.
7. The service area covered by the SNP.
8. The contract period for the SNP.

Although MIPPA's minimum requirements oblige D-SNPs to describe how they will provide or arrange for Medicaid services for enrollees, contracts meeting only the minimum requirements do not require integration or alignment of Medicare and Medicaid administrative processes (e.g., enrollment processes, marketing guidelines, network adequacy review) (MedPAC, 2013). However, states can include language in their MIPPA contracts with D-SNPs to require or at

least encourage administrative alignment and benefit integration (Verdier et al., 2016). In addition, states have several program design options that can increase the degree of Medicare-Medicaid integration and alignment in their D-SNP-based programs, including from least to most aligned (Archibald & Kruse, 2015):

- **Include Medicare Cost-Sharing, Medicaid Wraparound Services, or Both:** States can require D-SNPs to pay enrollees' Medicare premiums and cost-sharing out of their capitation payments (state Medicaid agencies would otherwise pay for premiums or cost-sharing directly), which can help to coordinate claims processing, reduce administrative burden on providers, and decrease instances of balance billing of enrollees. States may also contract with D-SNPs to provide Medicaid acute care services not covered or only partially covered by Medicare (e.g., vision, dental, hearing, durable medical equipment, transportation, and care coordination).
- **Include Medicaid LTSS or Behavioral Health Services:** States can require D-SNPs to provide or arrange for Medicaid LTSS or behavioral health services. States that have established a high-degree of benefit integration under these arrangements are in a better position to pursue administrative alignment of Medicare and Medicaid processes and materials (e.g., marketing materials, beneficiary and provider notices).
- **Align D-SNPs and MLTSS Programs:** D-SNP contracts can be used to align a state's Medicaid managed care plans, including MLTSS plans, with D-SNPs operating in the state by requiring the entities offering Medicaid plans to also offer companion D-SNPs covering the same geographic area, or *conversely*, by requiring the entities offering D-SNPs to offer MLTSS plans. D-SNPs may achieve high levels of administrative, financial, and clinical alignment when they are paired with companion Medicaid MLTSS plans for individuals who enroll in the same plan for both Medicare and Medicaid services (e.g., creating a single enrollment process and form, care management model, benefits determination process) (Integrated Care Resource Center, 2014b). Twenty-two states currently have MLTSS programs for some or all of their populations, two more states will begin implementation in 2017, and several more programs are in the design stage (Center for Health Care Strategies, forthcoming). Consequently, more states may have the opportunity to align D-SNPs and MLTSS programs. *Exhibit 2* describes Tennessee's approach to promoting aligned D-SNP-MLTSS plan enrollment.
- **Require D-SNPs to Become Fully Integrated Dual Eligible Special Needs Plans (FIDE SNPs):** FIDE SNPs are a special type of D-SNP that must coordinate and be at risk for coverage of both Medicare and Medicaid services, including LTSS, in return for a capitated payment. FIDE SNPs must also have procedures in place for administrative alignment of Medicare and Medicaid processes and materials. States can require D-SNPs to request designation from CMS as a FIDE SNP by submitting their MIPPA contracts for CMS review and approval. FIDE SNPs may be eligible to receive additional Medicare payments depending on the overall frailty level of their enrollees (CMS, 2016b). FIDE SNPs are the most integrated delivery model outside of the PACE and the Financial Alignment Initiative demonstrations (Verdier, 2015).

**EXHIBIT 2. Tennessee’s Approach to Promoting Aligned D-SNP-MLTSS Plan Enrollment**

Tennessee’s Medicaid agency--the Bureau of TennCare--seeks to improve care coordination for dual eligible beneficiaries by having a single entity be responsible for providing both Medicare and Medicaid services. Several D-SNPs were already operating in Tennessee when the state launched its MLTSS program, TennCare CHOICES in LTSS, in 2010. In late 2013, as part of a statewide procurement, the state required all its Medicaid managed care contractors to offer both a TennCare CHOICES plan and a D-SNP. These new contracts were effective January 1, 2015. This requirement created an aligned platform that allows one organization to coordinate an enrollee’s Medicare and Medicaid services. Currently, the state has six D-SNPs, three of which operate companion MLTSS plans.

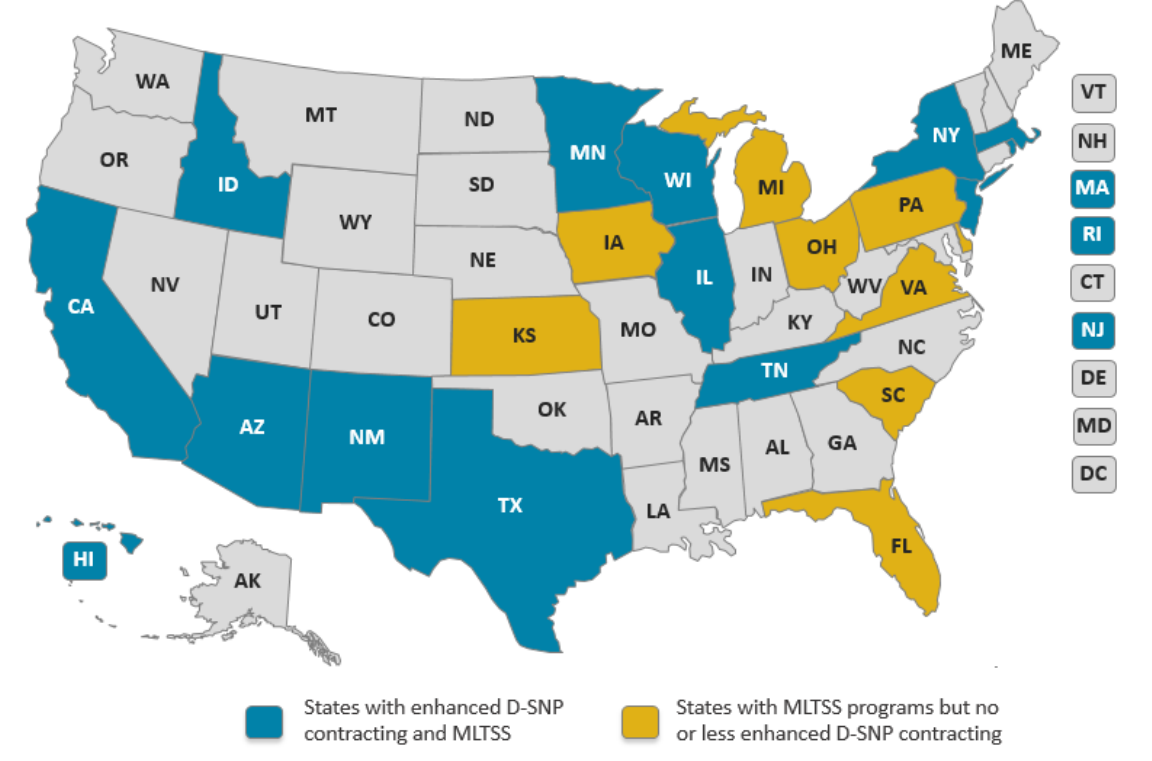

States’ MIPPA contracts with D-SNPs are often not publicly available, so the extent to which states employ these different contracting options is not well documented.<sup>4</sup> A recent analysis from the Integrated Care Resource Center found that 13 states go beyond MIPPA’s minimum requirements (Verdier et al., 2016). An increasing number of states are developing Medicaid MLTSS programs, which is a factor that may encourage more states to use their MIPPA contracting options to strengthen Medicare-Medicaid integration. *Exhibit 3* shows states that have aligned D-SNPs with MLTSS programs using program design strategies and MIPPA contract language and states with MLTSS programs that have the potential to create aligned D-SNP/MLTSS programs.<sup>5</sup>

---

<sup>4</sup> The number of D-SNPs that have attained FIDE SNP status is documented in CMS’s monthly SNP Comprehensive Reports (CMS, 2017a).

<sup>5</sup> Pennsylvania and Virginia are actively working to enhance their D-SNP contracts in anticipation of launching their MLTSS programs in 2017. Iowa has no D-SNPs as of 2017, but could attract these plans in the future.

## 4. Policy Options to Improve Integration and Alignment

*The policy options presented in this report represent findings from the literature, discussions with subject matter experts, and a roundtable of state health officials. The policy options presented are NOT recommendations or official statements of HHS policy positions.*

Misalignment in the administrative functions of the Medicare and Medicaid programs creates significant burdens for states and health plans trying to provide integrated care to dual eligible beneficiaries. For example, differing processes and timelines for appeals can create confusion for beneficiaries who must keep track of whether Medicare or Medicaid covers the specific services they receive even though they may be enrolled in a D-SNP responsible for providing these services.

In this section, we discuss areas where changes in federal and state policies could improve Medicare and Medicaid integration and alignment within D-SNP-based integrated care programs: (a) network standards and reviews; (b) care management; (c) marketing; (d) beneficiary and provider notices; (e) data collection and quality measurement; and (f) grievances and appeals. For each area, we present policy options that, if pursued, may have the greatest impact in enhancing the degree of Medicare-Medicaid integration attainable by D-SNPs. This section also briefly discusses other administrative functions (appeals and grievances and benefit integration) where there are opportunities to improve Medicare and Medicaid integration and alignment via D-SNPs. *Appendix C* contains additional policy options that may be more difficult to pursue or may be of lower priority.

### 4.1. Network Standards and Reviews

D-SNPs must have provider networks that ensure access to the full range of covered services. However, differing Medicare and Medicaid standards and review processes can pose a challenge to fulfilling this requirement:

- CMS specifies the required number of MA providers and facility types for every county in every state and time and distance requirements for how long and how far beneficiaries should be made to travel to access providers and facilities.<sup>6</sup> These requirements are based on the population size and demographics of the general MA population, as opposed to Medicaid provider network adequacy standards, which vary by state and are outlined in state Medicaid agency health plan contracts that must conform to federal Medicaid standards (42 CFR §438.206(a); 42 CFR §438.207(b); Integrated Care Resource Center, 2016b).<sup>7</sup>
- CMS evaluates network adequacy at the contract level--which for any MA organization may include both many regular MA plans and D-SNPs--rather than at plan-level, so an

---

<sup>6</sup> Although CMS does take population size and density into account through county designation types (e.g., Large Metro, Metro, Micro, Rural and Counties with Extreme Access Considerations), physical geography is not considered.

<sup>7</sup> States that contract with health plans to provide LTSS must develop: (1) time and distance standards for LTSS provider types in which an enrollee must travel to the provider to receive services; and (2) network adequacy standards other than time and distance standards for LTSS provider types that travel to the enrollee to deliver services. For more information see: 42 CFR §438.68. *Network Adequacy Standards*. <https://www.govregs.com/regulations/42/438.68>.

individual D-SNP's network may not necessarily be aligned with the needs of that specific enrolled plan population (CMS, 2017b).

- MA network adequacy reviews do not consider the availability of Medicaid's non-emergency medical transportation benefit to dual eligible beneficiaries, which may improve access to services.

States and health plans cited instances where less detailed attention to geography in the MA standards led to D-SNP networks being rejected. One state provided an example in which D-SNPs were told by CMS to include in their networks providers located across a lake that, while perhaps a mile away straight across the lake, would require a day's drive. This circumstance was accounted for in the state's Medicaid provider network requirements, but not in the MA standards.

Network adequacy is central to the development of D-SNP-based integrated care programs providing both Medicare and Medicaid services. In addition, MA organizations can drop counties from their service areas if provider networks in those counties do not meet the standards, but this poses a problem for states with MLTSS programs that require their Medicaid contractors to offer a D-SNP.<sup>8</sup> If the MA organization cannot offer a D-SNP in a service area, then its companion Medicaid plan could lose its contract for that same area, causing the state to miss an opportunity to encourage enrollment in an aligned Medicare and Medicaid program.

The following policy option could address many of these issues:

- **Policy Option 1: HHS could work with states to develop D-SNP-specific network adequacy standards and processes that:**
  - **Provide greater flexibility in the application of Medicare time and distance standards to better reflect Medicaid standards and to account for unique geographies while ensuring that any tailored requirements meet the specific needs of the enrolled population.**
  - **Consider the availability of Medicaid's non-emergency medical transportation benefit when assessing network adequacy for individuals who would depend on this assistance.**
  - **Give state Medicaid officials the option to participate in CMS reviews of integrated D-SNP service area expansions and exception requests.**
  - **Review provider networks at the D-SNP level rather than the contract level when the MA contract includes non-D-SNP products.**

**Rationale:** During our case studies and in-person meeting, state officials said that revising D-SNP network adequacy standards is one of their highest priority issues. States argued that if they were included in the D-SNP network review process, it could provide

---

<sup>8</sup> MA organizations may request exceptions to the MA network standards based on local patterns of care, and these exception requests are reviewed and granted on a case-by-case basis by CMS. Medicaid officials in states with integrated D-SNP programs are not involved in the CMS exceptions review process, although they may coordinate with D-SNPs that are preparing exception requests for CMS review.

CMS with a better understanding of specific geographies and other unique state characteristics and could help CMS to more effectively assess network adequacy for D-SNPs. CMS has allowed Minnesota to exercise this option through its demonstration program, and the state reported that this is a valuable process. *Exhibit 4* illustrates how Minnesota has provided input to CMS on D-SNP provider network standards.

In addition, states would like an opportunity to explain how dual eligible beneficiaries' access to Medicaid's non-emergency medical transportation benefit can expand access to services by transporting them to providers outside of their immediate area, supporting individuals who do not own cars, or helping them get to providers not accessible by public transportation. HHS estimated that states spent \$1.3 billion in fiscal year 2012 on non-emergency medical transportation (U.S. Government Accountability Office [GAO], 2014a). However, this same study noted that, in many states, access to and the quality of transportation services requires improvement.

Lastly, reviewing provider networks at the plan level would allow for greater alignment of MA and Medicaid network adequacy reviews that is not possible when MA network adequacy is reviewed at the contract level. State officials suggested that a plan-level review would more clearly highlight potential network deficiencies in the types of providers most critical in serving dual eligible populations. CMS now can offer this plan-level review using new network mapping functionalities in the Health Plan Management System (HPMS).<sup>9</sup>

CMS is exploring options to revise MA provider standards. In its recently released *Advance Notice of Methodological Changes for Calendar Year 2018 for Medicare Advantage Capitation Rates and 2018 Call Letter*, CMS asked for comments on whether it should establish different provider network standards specifically for D-SNPs and whether or how such criteria could better ensure D-SNPs meet the health care needs of the populations they enroll (CMS, 2017c).

It is important to note that tailoring network standards for D-SNPs to account for certain circumstances must reflect the clinical and service needs of dual eligible beneficiaries who tend to have a greater number of and more complex, chronic conditions and functional limitations. There are instances in which Medicare standards offer greater beneficiary access. For example, one state noted that Medicare standards provided greater access to behavioral health specialists compared to its state requirements. Both states and plans agreed that CMS should consider the specific needs of D-SNP enrollees (e.g., higher rates of serious mental illness, dementia, heart disease) when establishing new requirements. Some stakeholders are concerned that modifying the network adequacy standards to give more exceptions to D-SNPs could result in approval of plans with insufficient provider networks. They would prefer that any problems with the MA standards, such as inadequate recognition of geography, be resolved for all beneficiaries.

---

<sup>9</sup> CMS's HPMS is a web-based information system that supports MA plans, including D-SNPs, with data collection and reporting activities and plan enrollment, compliance, and other business functions. For example, CMS sends important communications to plans through this system and plans use HPMS to submit marketing materials and formularies for CMS's review and also to upload data on complaints, cost reports, and types of audits.

#### **EXHIBIT 4. Minnesota Provides Input on D-SNP Provider Network Standards**

The *Minnesota Demonstration to Align Administrative Functions for Improvements in Beneficiary Experience* is testing new provider network standards and review methods to better reflect where dual eligible individuals live and what services they use. Also, the state provides CMS with input on: (1) issues to consider while assessing plans' provider networks; and (2) plans' network exception requests. CMS staff reported that Minnesota provided very helpful information that allowed for the development of better, more consumer-friendly network standards. Minnesota's FIDE SNPs reported that this network adequacy review process more accurately reflected the needs of their enrollees. State officials would like to extend this process to the review of service area expansion and exception requests, where they believe that state Medicaid directors should be consulted more routinely.

#### **4.2. Care Management**

Care management tasks performed by D-SNPs include: (1) conducting assessments of new enrollees; (2) developing care plans; (3) arranging visits to care providers; (4) ensuring medication reconciliation; (5) connecting individuals to social and community supports; and (6) facilitating communication among an interdisciplinary care team. Effective care management is needed to meet the multidisciplinary needs of dual eligible individuals (Ensslin & Barth, 2015). MA and state Medicaid programs have care management requirements for D-SNPs and MLTSS plans. CMS has established a framework for the development and approval of a Model of Care for all SNPs, including D-SNPs, in which plans describe the quality, care management, and care coordination processes that will be used to address the unique needs of their enrollees (CMS, 2014b).<sup>10</sup> The National Committee for Quality Assurance reviews and scores the Model of Care submissions. For MLTSS programs, states develop care management requirements for person-centered needs assessment, service planning, and service coordination that are consistent with CMS guidance and regulations and that are implemented through their contracts with Medicaid managed care organizations (CMS, 2013, 2014c).

Providing care management under separate Medicare and Medicaid systems creates significant administrative burdens. MA and state Medicaid managed care contracts have different requirements for needs assessments, care planning, and monitoring. Integrated D-SNPs must assure each program that its requirements are met while offering a unified, integrated product to enrollees (Burwell et al., 2010). For example, D-SNPs participating in Minnesota's Senior Health Options program must conduct assessments of enrollees using both the plan's MA Health Risk Assessment tool and the MnCHOICES assessment tool for the state's MLTSS programs. The areas covered by the assessments overlap in several areas, including clinical history, functional status, medication use, and cognitive status (Ingram et al., 2013). In a truly integrated

---

<sup>10</sup> The D-SNP's Model of Care must include: (1) the D-SNP's description of the population to be served; (2) its care coordination approach, including staff structure, assessment tool, individualized care plan, interdisciplinary care team components and processes, and care transition protocols; (3) the D-SNP's guidelines, expertise, and training approach for the SNP provider network; and (4) a quality measurement and performance improvement plan that specifies measurement tools and goals.

program, these separate assessments might be combined into one, thus reducing the burden on both dual eligible enrollees and the plans.

The following policy option could address some of these misalignments:

- **Policy Option 2: HHS could promote greater integration of the MA Model of Care requirements with state care management requirements for D-SNP-based programs by allowing states to include Medicaid care management requirements in the D-SNP Model of Care. The development of a formal process for inclusion of Medicaid requirements would allow states and D-SNPs to create a comprehensive Model of Care for D-SNP-based integrated programs. In addition to formalizing a state process, HHS and states could work together to consider how to better understand varying care management activities for dual eligible beneficiaries enrolled in D-SNPs by developing audit guidance for D-SNPs that accounts for state-specific requirements that have been added to the Model of Care. Finally, CMS could review the impact of its requirement for contract-level Model of Care submissions on states' and health plans' alignment efforts.**

**Rationale:** State officials agreed that care management was one of their highest priorities among the Medicare-Medicaid integration issues. They said that improved care coordination is central to the potential value of D-SNPs and aligned D-SNP/MLTSS programs. State officials believed it is imperative that they can add state Medicaid-specific elements to the D-SNP Model of Care to make these programs work as intended. For example, states want to require D-SNPs' Models of Care to include descriptions of how the plans will conduct assessments of enrollees' LTSS needs and develop integrated Medicare-Medicaid care plans. (*Exhibit 5* describes how Massachusetts requires plans to inventory enrollees' LTSS needs.) Although SNP Model of Care criteria do broadly allow D-SNPs to insert state Medicaid-specific elements, the states and plans interviewed for this project reported that some CMS auditors, at least in early auditing cycles, have questioned the appropriateness of including such elements in the Model of Care.

Some plans have asked CMS to be allowed to submit an integrated Medicare-Medicaid Model of Care so that the state and CMS could review it concurrently. Minnesota's demonstration program is testing concurrent CMS and state review of plans' Models of Care. Although state Medicaid officials could see the Model of Care submissions in their entirety, including both Medicare and Medicaid elements, they were only permitted to comment on the Medicaid elements the plans had inserted. Minnesota state Medicaid staff believe that, because the Model of Care is so central to providing truly integrated care, they should be able to comment on all elements, including the Medicare-only requirements. CMS staff acknowledged that there may be value in concurrent Model of Care review if the integrity of the National Committee for Quality Assurance review process is not compromised. They also foresee challenges in auditing state-specific Model of Care elements across 50 states, the District of Columbia, and Puerto Rico. States expressed a desire to establish a closer partnership with CMS to strengthen care management within integrated care programs.

Effective in contract year 2017, MA organizations operating multiple D-SNPs under a single MA contract--which may span several states--must have a single Model of Care

applicable to all the D-SNPs under that contract (Integrated Care Resource Center, 2016b). Although D-SNPs can tailor subsections of their Model of Care to an individual state’s population or program as needed (CMS, 2015a), state officials strongly felt that having a single Model of Care across an entire contract encourages a “one-size-fits-all” approach rather than tailoring care management to states’ needs. States requested that CMS review the consequences of this guidance.

**EXHIBIT 5. Massachusetts’ Care Management Requirements Promote Continuity of Care**

Massachusetts’ D-SNP–based integration program, Senior Care Options (SCO), enrolls dual eligible beneficiaries age 65 and over. It is important for individuals enrolling in SCOs to maintain continuous access to any LTSS that they may be using. The state developed a checklist that inventories and categorizes the LTSS used by incoming SCOs enrollees. Plans can use this inventory to ensure that new SCO enrollees have their LTSS in place on the first day of their enrollment. This allows plans to coordinate a smooth transition of services and better prepares them to create care plans that address enrollees’ needs.\*

\* Before Contract Year 2016, Medicare Health Risk Assessments could not be performed until after a beneficiary’s effective date of enrollment in a D-SNP (CMS MMCO, 2016a).

**4.3. Marketing**

MA and federal Medicaid managed care marketing requirements differ in several ways (Soper & Weiser, 2014).<sup>11</sup> For example, although federal Medicare and Medicaid requirements related to unsolicited or cold-call marketing are similar, several states have more stringent beneficiary protections. Misalignments in Medicare and Medicaid marketing requirements create challenges for beneficiaries who typically receive separate marketing and educational materials (e.g., member handbooks, provider directories, and drug formulary lists) that do not consolidate Medicare-related and Medicaid-related information in one place.

Both states and CMS are working to better align and integrate marketing information and processes to help beneficiaries understand what services a health plan offers and to make more informed decisions about opportunities to enroll in an integrated D-SNP program.<sup>12</sup> CMS is examining actions it could take without a change in regulations and has received input from states on what flexibilities would be beneficial. For example, CMS is exploring the feasibility of allowing integrated D-SNP/MLTSS plans to use the marketing materials developed for the D-SNPs participating in the *Minnesota Demonstration to Align Administrative Functions for Improvements in Beneficiary Experience* (CMS MMCO, 2016a). For their part, some states are

<sup>11</sup> The Medicare Marketing Guidelines, a subregulatory guidance document updated annually, implement CMS marketing regulations for all MA organizations and include some specific requirements for D-SNPs (CMS, 2016g).

<sup>12</sup> This report refers to both FIDE SNPs and aligned D-SNPs and MLTSS plans as “integrated D-SNPs.” Although states vary in how they refer to these arrangements and in how they design enrollment, in both approaches the beneficiary has the option to have Medicare and Medicaid services coordinated by one integrated D-SNP contractor.

using their MIPPA contracts with D-SNPs to overcome misalignments in marketing requirements and material reviews by requiring D-SNPs to submit marketing materials to the state at the same time as CMS so that the state can ensure that the Medicaid information provided is accurate.

The following two policy options could address some of the misalignments in Medicare and Medicaid marketing requirements:

- **Policy Option 3: States could modify some of their specific Medicaid managed care marketing restrictions to align with Medicare practices.**

**Rationale:** This policy option would provide D-SNPs with targeted opportunities to educate dual eligible beneficiaries on the value of enrolling in an aligned plan for Medicare and Medicaid. Enrollment of beneficiaries into aligned D-SNPs and MLTSS plans is a goal of many states. However, to better facilitate this, states may need to reevaluate their Medicaid marketing requirements to ensure that plans can provide appropriate information about the benefits of aligned enrollment. Some states have stringent beneficiary protection requirements about when plans can contact enrollees and for what purpose. These restrictions could inadvertently prohibit Medicaid MLTSS plans from educating their enrollees about Medicare and the benefits of being in aligned D-SNP and MLTSS plans.<sup>13</sup> For example, Arizona used to prohibit Medicaid managed care plans from conducting any marketing activity solely intended to promote enrollment. The state eventually modified its Medicaid restrictions around D-SNP marketing to allow the plans to educate beneficiaries about the benefits of enrollment in an integrated product. Arizona state officials believe that aligned enrollment increased significantly because of this change and other beneficiary education activities conducted by the state. *Exhibit 6* includes language from Arizona’s MIPPA contract.

The states we spoke with agreed that there is value in examining whether their Medicaid marketing requirements conflict with their broader goals for aligned enrollment of dual eligible individuals. One state cautioned that if Medicaid marketing restrictions were modified, state Medicaid officials should closely monitor D-SNP marketing materials, particularly those created for plans that use the material in multiple state markets. For example, states would need to ensure that descriptions of supplemental Medicare benefits available through D-SNPs do not overlap with benefits that are already covered under the state’s Medicaid program.

---

<sup>13</sup> Federal Medicaid managed care regulations do not preclude marketing to a Medicaid managed care organization’s current enrollees.

- **Policy Option 4: States could coordinate with D-SNPs on education and outreach activities to help beneficiaries understand the value of integrated programs.**

**Rationale:** States could take a more active role in helping to educate dual eligible beneficiaries about the benefits of integrated care programs and enrollment in aligned D-SNP/MLTSS plans. One approach is for states to encourage plans to conduct more beneficiary outreach and education. To ensure that materials deliver a consistent message across plans about the benefits of aligned enrollment and Medicaid benefits, a state could develop model language or other written statements about the goals of its integrated care program.

In addition, some states like Arizona and New Jersey are sending educational materials directly to beneficiaries. Both state officials and D-SNPs noted during the case study interviews that beneficiaries may have more confidence in materials sent to them by states than by health plans, and that many states may not be aware that this type of outreach is permitted under Medicaid regulations. The states we interviewed suggested that CMS could also support these efforts by issuing subregulatory guidance (e.g., a State Medicaid Director Letter) to remind states that they have the flexibility to directly engage beneficiaries.

See *Appendix C* for additional policy options related to marketing requirements.

#### **EXHIBIT 6. Arizona Uses Marketing Tools to Encouraging Aligned Enrollment**

A goal of Arizona’s Medicaid agency is to have all dual eligible individuals enrolled in aligned D-SNP and Medicaid plans, and the state has used several tools to accomplish this goal. The state requires that all Medicaid contractors operate a D-SNP in the same service areas as their Medicaid plans. Moreover, the state permits D-SNPs to tailor their marketing efforts to their own Medicaid MLTSS product members. Arizona’s contract with D-SNPs states, “[The State] encourages MA D-SNP Plan to only direct market to individuals enrolled in MA D-SNP Health Plan’s AHCCCS Medicaid plan” (Arizona Health Care Cost Containment System, 2016). This requirement promotes aligned enrollment by strongly suggesting that D-SNPs market only to individuals who are already enrolled in their Medicaid products--essentially saying that one plan should not try to enroll other plan’s Medicaid members in its own D-SNP. In general, the state reports that this requirement has been effective in increasing the number of dual eligible individuals enrolled in aligned D-SNP and Medicaid plans.

Arizona also invested in educational outreach to promote aligned enrollment. It has worked with State Health Insurance Assistance Programs and state Aging and Disability Resource Center information and referral specialists to educate individuals about the benefits of D-SNPs. Ongoing education has made beneficiaries more aware of the advantages of being in aligned plans for their Medicaid and Medicare benefits.

#### 4.4. Beneficiary and Provider Notices

Under both MA and Medicaid managed care programs, beneficiaries and providers have rights and protections related to access to services and financial liability. Both MA and state Medicaid agencies require that information about these rights and protections and plan benefits be communicated through written notices. MA plans, including D-SNPs, send a variety of notices to beneficiaries to explain coverage and how to access care, including among others: (1) a Summary of Benefits; (2) the plan formulary; (3) a member handbook also called Evidence of Coverage--a document that provides information about covered benefits, any cost-sharing responsibilities, and other important coverage details; (4) an Annual Notice of Change--a document that informs beneficiaries about any changes in coverage, costs, or service area that will be effective in the following calendar year; and (5) provider and pharmacy directories.<sup>14</sup> A variety of other beneficiary notices are required related to denial of coverage for services and the opportunity to request appeals and file grievances. Additionally, MA plans are required to send notices to providers that explain payments and benefit coverage determinations. In integrated care programs, misalignments result from MA and Medicaid requiring different and sometimes conflicting content in these notices, particularly regarding beneficiary notices related to benefit determinations. For example, D-SNPs must send advance notices to beneficiaries in skilled nursing facilities regarding when their Medicare benefits will be exhausted. This may be confusing for dual eligible beneficiaries whose coverage for the facility would continue under Medicaid.

The following policy option could address some of these misalignments:

- **Policy Option 5: HHS could work with states to develop a set of integrated beneficiary and provider materials exclusively for D-SNP–based programs. In addition, CMS could allow for state review/comment on beneficiary notification materials before templates are finalized, changes to instructions are made, or guidance is issued by CMS to D-SNPs on use of integrated notices.**

**Rationale:** CMS recently issued a revised Integrated Denial Notice and a sample Summary of Benefits document that are used by D-SNPs. However, the broad consensus among the states and plans was that integrated versions also are needed for the Evidence of Coverage, Annual Notice of Change, explanation of payment notices, formularies, provider directories, and other materials used by D-SNPs. CMS staff have been working to make the current D-SNP Annual Notice of Change and Evidence of Coverage documents more flexible. On February 21, 2017, CMS published a *Federal Register* notice asking for a second round of comments on standardized Evidence of Coverage and

---

<sup>14</sup> The Evidence of Coverage document describes how enrollees can select a provider, what services are covered, what to do if they have a complaint, etc. The Annual Notice of Change is sent to MA (including D-SNP) enrollees every fall. It details any changes in coverage, costs, or service area that will take place in their plan in the coming year. If enrollees are unhappy with the planned changes, they can select a different plan in the upcoming open enrollment period.

Annual Notice of Change documents (CMS, 2017d).<sup>15</sup> However, these standardized documents do not yet integrate both Medicare and Medicaid information.

The states we interviewed also asked for more input on the process that CMS uses to create integrated notices. For the new Integrated Denial Notice and Summary of Benefits document, CMS issued guidance, then held a comment period during which states and other stakeholders could give their feedback about the content of the notices and instructions. State officials believed that CMS should provide opportunities for greater state input into the early development of these integrated notices (perhaps by convening a workgroup), rather than soliciting their feedback after a fully formed draft was completed. The states expressed a desire for a more cohesive and comprehensive approach to communication with dual eligible populations through notices and other documents. *Exhibit 7* illustrates how Massachusetts and Minnesota are using integrated materials to improve beneficiaries' experience of care.

See *Appendix C* for additional policy options related to beneficiary and provider notices.

**EXHIBIT 7. Massachusetts and Minnesota Use Integrated Materials to Improve Beneficiaries' Experience of Care**

Both Massachusetts and Minnesota have an integrated enrollment process for their D-SNP-based integrated care programs. In Massachusetts, the Senior Care Options (SCO) program has a single enrollment form that incorporates the elements required by Medicare and Medicaid. Plans must submit the beneficiary's enrollment form to CMS and obtain approval for enrollment under Medicare before enrolling the beneficiary with the state for the Medicaid portion of SCO. Massachusetts D-SNPs report that beneficiaries find this single enrollment process easy to understand, and the plans see it as the cornerstone to providing an integrated program experience for enrollees.

Before the start of their demonstration, the FIDE SNPs in the Minnesota Senior Health Options program were already providing members with a single identification card, an integrated network of providers, and one member services phone number to assist enrollees. Now under the demonstration, Minnesota Senior Health Options plans can provide enrollees with a single member handbook that integrates information about Medicare and Medicaid benefits and processes and a single directory that lists all network Medicare and Medicaid providers.

**4.5. Data Collection and Quality Measurement**

States need both Medicare and Medicaid data to effectively plan their integrated care programs for dual eligible beneficiaries and to assess the quality of care provided. Many state Medicaid

---

<sup>15</sup> CMS solicited comments on nine versions of the standardized Annual Notice of Change and Explanation of Coverage documents to be used by different types of MA plans: Health Maintenance Organization, Cost, D-SNP, Medicare-Medical Savings Account, Private-Fee-for-Service, Preferred Provider Organizations, Preferred Provider Organization with Prescription Drugs, Health Maintenance Organization with Prescription Drug, and Prescription Drug (CMS, 2017d).

agencies require that their D-SNPs submit MA encounter data to the state, but the quality and completeness of these data vary, as does states' ability to analyze them (Integrated Care Resource Center, 2015). Starting in 2012, CMS required MA plans (including D-SNPs) to submit encounter data, but CMS has not yet made these data available to states (Integrated Care Resource Center, 2015; GAO, 2014b, 2017).

D-SNPs also have challenges in accessing the data they need. If a beneficiary is enrolled in one plan's D-SNP product and another plan's MLTSS product or receives LTSS through the Medicaid fee-for-service system, the D-SNP is essentially "blind" to the Medicaid services provided to that beneficiary. Care management is likely to be more effective when D-SNPs know about all acute care services, care transitions, prescription drugs, and LTSS use.

The following policy option could provide greater access for D-SNPs to needed data:

- **Policy Option 6: States could provide D-SNPs with data on beneficiaries' Medicaid or Medicare service utilization history to support initial enrollee risk stratification and ongoing care management efforts.**

**Rationale:** States could require plan submission of the beneficiary data needed to improve care coordination. For example, many states require D-SNPs to submit encounter data, which states could then provide to MLTSS plans for dual eligible beneficiaries who are not in aligned plans. The converse is also possible: for states to provide D-SNPs with data on their enrollees who are enrolled in non-aligned MLTSS plans or claims data for individuals who receive fee-for-service LTSS. Arizona provides these data to its D-SNPs and MLTSS plans to support care coordination for their dual eligible beneficiaries. *Exhibit 8* describes Tennessee's requirements for data exchange.

See *Appendix C* for additional policy options related to data collection and quality measurement.

#### **EXHIBIT 8. Tennessee Requires Data Exchange to Promote Care Coordination**

In Tennessee, all MLTSS plans must offer D-SNPs, but the converse is not true, and three D-SNPs in the state do not have companion MLTSS plans. Thus, it is possible for beneficiaries to enroll in one organization's D-SNP and another organization's MLTSS plan. When dual eligible beneficiaries are enrolled in two plans for Medicare and Medicaid services, Tennessee requires D-SNPs and TennCare CHOICES MLTSS plans to share Medicare and Medicaid encounter data, respectively, to promote care coordination. For example, each business day, D-SNPs must report information on use of covered services, such as hospitalizations, emergency department visits, and other care coordination needs to the enrollee's CHOICES plan. In addition, D-SNPs' care coordinators may reach out directly to the CHOICES MLTSS plan's care coordinator to collaborate around the beneficiary's discharge planning needs and care planning. The plans reported that it was technically difficult and costly to implement the information systems needed for this reporting process, but it greatly improved care coordination.

#### 4.6. Appeals and Grievances

When Medicare or Medicaid denies a beneficiary a service, in whole or in part, the individual has a right to appeal that determination. However, the two programs have different requirements and timelines for appeals (Kruse & Philip, 2015). In its annual reports to Congress, CMS MMCO has recommended legislation that would allow the Secretary of HHS to create an integrated appeals process for dual eligible beneficiaries enrolled in managed care plans providing both Medicare and Medicaid benefits (CMS MMCO, 2016b).

One significant challenge to implementing this is the requirement in Section 1852(g) of the Social Security Act that Medicare provide beneficiaries with a written notice when a request for a service is denied--even when that service is covered under Medicaid for dual eligible beneficiaries (SNP Alliance, 2016). CMS created an Integrated Denial Notice that all MA plans, including D-SNPs and FIDE SNPs, must send to beneficiaries to explain why Medicare coverage was denied and how beneficiaries can appeal that decision. When a beneficiary is enrolled in an aligned D-SNP/MLTSS plan or FIDE SNP, and the denied service can be covered under Medicaid, this information can be inserted by the plan in a free text field at the back of the multipage notice.

Despite this effort, state officials and health plans reported that beneficiaries, many of whom have low literacy skills or who are non-English speaking, continue to be confused and alarmed by receipt of the Integrated Denial Notice, because it may still appear that a service had been denied when it is covered under Medicaid. The result may be an increased volume of appeals and barriers to beneficiaries' access to care (Kruse & Philip, 2015). Although CMS has tried to mitigate this issue by making additional clarifications to the Integrated Denial Notice, this has not completely resolved the problem, and CMS has asked for public comment on the form and its instructions (CMS, 2016c).

- **Policy Option 7: HHS could change the notification process around benefit denial so that beneficiaries in aligned programs would not receive a denial notice if a service is denied by the MA plan but covered by Medicaid.**

**Rationale:** The problem of having to issue a denial notice from the MA plan even when a service is covered by Medicaid is a major concern for both states and health plans. States and plans felt that an exception from sending denial notices should be made for enrollees in integrated plans whenever either Medicare or Medicaid will cover the benefit in question; however, this would require a change in statute. Ultimately, states and plans may be able to work around this problem if they move to serve dual eligible beneficiaries through FIDE SNPs, which can create an integrated benefits determination process that adjudicates service requests against a single, unified list of benefits rather than separate lists of Medicare and Medicaid benefits. In the meantime, HHS could provide plans with other options to communicate benefit determinations to enrollees in integrated care programs.

## **5. Policy Options to Encourage Investment in D-SNP-Based Approaches to Integration**

The D-SNP platform is still relatively new and there is still considerable opportunity to expand both the extent of D-SNP service area coverage and the number of enrollees. In the previous section of this report, we presented policy options to improve the integration and alignment of Medicare and Medicaid administrative functions within D-SNP-based integrated care programs. In this section, we focus on encouraging states and MA organizations to increase investment in D-SNP-based approaches to integration through the exercise of policy options aimed at:

(a) expanding D-SNP enrollment and encouraging contractor alignment with Medicaid MLTSS plans; (b) supporting states and plans; and (c) refining MA payment policies.

### **5.1. Encouraging Aligned Enrollment**

States have a range of D-SNP contracting tools available to them, including program design strategies that could encourage aligned beneficiary enrollment and create the foundation for a more integrated approach. One important design strategy for states is to align D-SNPs with their Medicaid managed care plans and encourage beneficiaries to enroll in these aligned D-SNP/MLTSS plans so that one entity is responsible for coordinating and providing/arranging the full range of covered services.

States have significant flexibility to use their MIPPA contracts to increase aligned enrollment and promote care coordination. Several of the states with the highest D-SNP enrollment--Arizona, Massachusetts, Minnesota, Pennsylvania, Tennessee, and Texas--have or plan to launch MLTSS programs, and their MIPPA contracts require that D-SNPs offer a companion MLTSS plan or that MLTSS plans offer a companion D-SNP.

These aligned arrangements have potential benefits to enrollees because they may achieve high levels of administrative, financial, and clinical alignment (Verdier et al., 2016). Plans also see these arrangements as beneficial. In our case study interviews, D-SNPs repeatedly told us that, for their MA organization corporate parents, the most desirable markets were in states where they had the opportunity operate Medicaid acute care, Medicaid MLTSS contracts, general MA and D-SNP contracts. These multiple contracts may allow these organizations to realize economies of scope regarding their information systems, care manager training, or other administrative functions. It may also allow them to be more responsive to changes in a state's insurance landscape.

Another design option for states is to require D-SNPs to become FIDE SNPs, which must coordinate LTSS and have procedures in place for administrative alignment of Medicare and Medicaid processes and policies. In FIDE SNPs, as with aligned D-SNP/MLTSS plans, all care is coordinated by one entity.

Policy options that could help to encourage aligned enrollment in integrated health plans include the following:

- **Policy Option 8: HHS could lift the temporary moratorium on new approvals for “seamless conversion” submitted by D-SNPs.**

**Rationale:** Enrollment into the MA program is voluntary for Medicare beneficiaries. In contrast, states may choose either mandatory or voluntary enrollment in Medicaid managed care programs, although they need CMS waiver approval to require mandatory enrollment of certain populations (e.g., dual eligible and children with special health care needs). Consequently, dual eligible beneficiaries have the choice to enroll in different health plans for their Medicare and Medicaid benefits or they may remain in the Medicare fee-for-service program, but be required to enroll in a Medicaid health or MLTSS plan for services not covered by Medicare.

Despite the prohibition on mandatory enrollment in Medicare managed care, one tool that states and plans have had to enroll dual eligible beneficiaries in aligned Medicare and Medicaid plans is “seamless conversion.” This process allows a D-SNP to passively enroll Medicaid beneficiaries who are newly eligible for Medicare (i.e., just turning age 65 or at the end of the 2-year Social Security Disability Insurance waiting period), if they are already enrolled in that plan’s companion Medicaid product. D-SNPs in Arizona and Tennessee received CMS approval to use seamless conversion and have successfully enrolled several hundred beneficiaries a month into aligned plans. *Exhibit 9* describes Arizona and Tennessee’s use of the seamless conversion process.

Because of broad concerns about the adequacy of beneficiary protections, CMS put a temporary moratorium on approval of new requests to conduct seamless enrollment from all MA plans, including D-SNPs, as of October 21, 2016, while it reviews current policies (CMS, 2016f).

The state officials with whom we spoke felt that seamless conversion is a valuable tool to promote aligned Medicare-Medicaid enrollment. They were concerned that applying this moratorium to D-SNPs could limit dual eligible beneficiaries’ opportunities to enroll in aligned plans and suggested that the moratorium hinders states’ ability to better coordinate the current fragmented system of care for this vulnerable population. The states recommended that CMS remove the moratorium on seamless conversion for D-SNPs, adding more beneficiary protections as needed--perhaps language to protect continuity of care, increased notification requirements, and stricter network adequacy standards for a D-SNP to be approved--to do seamless conversion. States would like to be part of the discussion with plans and CMS about how to increase protections around and improve processes for seamless conversion.

It is important to note that some stakeholders may view seamless conversion, along with other policies that passively enroll beneficiaries into a health plan, as an infringement on beneficiary rights, even if the individual has an opportunity to refuse enrollment beforehand and opt out at any time thereafter. Under Medicare statute, individuals who receive Medicare Part A or Part B have “freedom of choice”--the ability to obtain health services from any provider that is qualified to participate in the program. Freedom of

choice extends to an individual's choice to enroll in an MA plan. In addition, some stakeholders are particularly concerned about applying passive enrollment policies to dual eligible beneficiaries and not to other Medicare beneficiaries, which could be perceived as discriminating against low-income individuals.

#### **EXHIBIT 9. Arizona and Tennessee Encourage Aligned Enrollment Through Seamless Conversion**

Arizona actively encouraged its D-SNPs to seek approval for seamless conversion. All of the state's D-SNPs applications for seamless conversion were approved and are enrolling between 400 and 500 newly eligible Medicare beneficiaries into aligned plans every month. Tennessee also encouraged its three aligned D-SNP/MLTSS plans to seek permission for seamless conversion. The state helped to review the plans' applications before submission to CMS and conducted an extensive readiness review process to ensure that the plans could satisfy required timelines for beneficiary notification by accurately and completely identifying their enrollees who would become newly Medicare eligible.

Tennessee sends information to the beneficiaries who will be seamlessly converted to explain the process and why aligning their Medicare and Medicaid health plan enrollment will help to promote care coordination. The state reports that several hundred beneficiaries have been enrolled through the seamless conversion process with an almost 100 percent retention rate prior to the Medicare effective date and a very low disenrollment rate after enrollment in the D-SNP is effective.

- **Policy Option 9: States could align their Medicaid annual open enrollment period with the Medicare open enrollment period to encourage selection of integrated or aligned Medicare and Medicaid health plans.**

**Rationale:** Differences in Medicare and state Medicaid contracting cycles--and subsequently beneficiary enrollment periods--can make it more difficult to establish alignment between D-SNPs and Medicaid managed care plans. Alignment of enrollment dates is also important to support the delivery of seamless care and beneficiary experience (Saucier et al., 2009). For example, it may be confusing for beneficiaries to understand why they would need to enroll in the same plan at one time point for Medicare services and a different time point for Medicaid services, and, thus, they may fail to enroll in one or the other aligned plan. In addition, processing enrollment applications is burdensome for health plans, but could be made less so by streamlining the process. Some states, such as Minnesota, have elected to align the Medicaid annual open enrollment period with the Medicare period to encourage selection of integrated or aligned Medicare and Medicaid health plans. Other states could consider changes to their Medicaid contracting cycles and enrollment periods to foster greater alignment with Medicare.

## 5.2. Supporting States and Plans

States are interested in using D-SNPs as a platform to integrate care for their dual eligible populations (Archibald & Kruse, 2015), but before they invest resources in this approach, they would like to have more data demonstrating its effectiveness. Data comparing the outcomes of D-SNP/MLTSS (or FIDE SNP) programs to those of the PACE and the Financial Alignment Initiative demonstrations, and to the outcomes of beneficiaries receiving care in fee-for-service systems, may help to inform state Medicaid agencies, legislators, advocates, and other stakeholders.

Some insurers also see D-SNPs as a potential growth area (Gold et al., 2013). However, D-SNPs face several operating challenges, which if addressed, could potentially encourage more insurers to build up their D-SNP operations. One such challenge is ensuring that payment rates are sufficient to address the needs of dual eligible beneficiaries' complex medical, behavioral health, and social support needs.

A policy option that could support states and plans in the development of D-SNP-based integrated care programs is the following:

- **Policy Option 10: HHS could consider increasing guidance and information sharing with states about the application process, review criteria, and associated incentives for plans to achieve designation as a FIDE SNP or a Highly Integrated D-SNP, including which plans have achieved those designations.**

**Rationale:** In addition to the required Part A and B benefits, CMS allows MA plans (including D-SNPs) to offer supplemental benefits not covered under fee-for-service Medicare that are primarily health-related (CMS, 2016d, e). MA plans commonly offer their enrollees reduced cost-sharing, reduced premiums, and vision or dental benefits.

As an incentive to D-SNPs to enroll dual eligible beneficiaries with more complex care needs and to achieve higher levels of integration, CMS can offer two types of designations to D-SNPs that meet specific criteria: (1) FIDE SNPs, which could receive adjusted payments to account for the frailty of their enrollees; or (2) Highly Integrated D-SNPs, which are able to provide their enrollees with flexible supplemental benefits, which must not duplicate Medicaid benefits, but may help to bridge the gap between Medicare-covered and Medicaid-covered services (CMS, 2016b). Examples of such flexible benefits include additional personal care assistance, in-home meal delivery, adult day care services, and support for informal caregivers.

It is possible for a D-SNP to be designated as both a FIDE SNP and a Highly Integrated D-SNP and to earn a designation for one category but not the other. *Exhibit 10* provides more description of the criteria plans must meet to achieve these designations.

As of February 2017, 39 FIDE SNPs were operating in eight states (Arizona, California, Idaho, Massachusetts, Minnesota, New Jersey, New York, and Wisconsin), with a total enrollment of 136,677 dual eligible beneficiaries (CMS, 2017a). Some states like Idaho, Massachusetts, Minnesota, New Jersey, and Wisconsin require their D-SNPs to seek

FIDE SNP status from CMS, but most others leave that decision to the plans. Providing states with more information about how D-SNPs can: (1) earn a FIDE SNP designation; (2) use their FIDE SNP status to better support integrated care for dual eligible beneficiaries; and (3) become eligible for payment incentives could spur more states to consider these plans as a means of furthering integration. *Exhibit 11* describes New Jersey's uses of FIDE SNPs to provide integrated care.

**EXHIBIT 10. Criteria for FIDE SNP and Highly Integrated D-SNP Designations\***

**FIDE SNPs** are D-SNPs that fully integrate Medicare and Medicaid. To obtain CMS approval to operate as a FIDE SNP, a plan must (CMS, 2016b):

- Provide access to Medicare and Medicaid benefits under a single managed care organization that includes coverage of specified primary and acute care and LTSS, consistent with state policy, under risk-based financing.
- Coordinate the delivery of covered Medicare and Medicaid health care and LTSS, using aligned care management and specialty care network methods for high-risk enrollees.
- Have CMS-approved and state-approved policies and procedures to coordinate or integrate member materials, enrollment, communications, grievance and appeals, and quality improvement.

Certain FIDE SNPs may qualify to receive a frailty adjustment payment to reflect the costs of treating high concentrations of frail individuals.

**Highly Integrated D-SNPs** must meet requirements for some benefit coordination and specified performance and quality-based standards. To attain CMS approval as a highly integrated D-SNP, the D-SNP must (CMS, 2016b):

- Have a valid contract with the state that: (1) includes coverage of specified primary and acute care and LTSS benefits and services to the extent capitated coverage is consistent with state policy; and (2) coordinates delivery of covered Medicare and Medicaid primary and acute care, and LTSS throughout its entire service area, using aligned care management and specialty care network methods for high-risk enrollees.
- Have received a 3-year National Committee for Quality Assurance approval of its Model of Care.
- Be part of a contract with a current three-star (or higher) overall quality rating.
- Not be part of a contract scoring two (negative) points or more on either the Part C or the Part D portion of the previous application cycle past performance review methodology.

Plans achieving this designation may request approval from CMS to offer their enrollees non-health-related flexible benefits beyond those provided by less integrated plans (e.g., additional personal care services, in-home meal delivery, adult day care services, and support for caregivers) (CMS, 2016b).

\* Although there may be overlap, not all FIDE SNPs will necessarily be D-SNPs meeting high standards of integration. The converse is also true: D-SNPs meeting high standards of integration may not necessarily be FIDE SNPs.

## EXHIBIT 11. New Jersey Uses FIDE SNPs to Provide Integrated Care

New Jersey is relatively new to Medicare-Medicaid integration on the D-SNP platform. The state began contracting with D-SNPs in 2012 and implemented MLTSS through its New Jersey FamilyCare managed care program in July 2014. After launching its MLTSS program, New Jersey made its D-SNPs responsible for the provision of both facility-based and community-based LTSS for their enrollees. By making D-SNPs responsible for these services, New Jersey helped all four of the plans to obtain FIDE SNP designation from CMS.

By requiring plans to become FIDE SNPs, the state ensured that both beneficiaries and providers would have a more seamless experience, because they would interact with a single plan--not a Medicare plan *and* a Medicaid plan. The state is now examining whether requiring D-SNPs to become a FIDE SNP has affected care coordination and quality of care. New Jersey will use a combination of Medicare claims and plan encounter data to measure all-cause readmission rates, hospital admission rates for acute and chronic ambulatory sensitive conditions, all-cause hospital readmission, and rates of follow-up after hospitalizations for mental illness. The state hopes this analysis will determine the impact of FIDE SNPs and build evidence of the effectiveness of aligned D-SNP/MLTSS plans.

In contrast to FIDE SNPs, which are more familiar to states and plans, designation as a Highly Integrated D-SNP does not seem to be well understood. Although CMS sent a memo to state Medicaid directors about this designation in 2016 (CMS, 2016e) and updated Chapter 16B of the Medicare Managed Care Manual (CMS, 2016b) to include more description of the category, few of the states or plans with which we spoke during our case studies or at our in-person meeting reported that they understood how these plans worked or why it might be beneficial for them to pursue this designation. Unlike FIDE SNPs, CMS does not report on which plans have been approved as meeting a high standard of integration. If CMS provides additional information about the benefits of this designation and how plans can apply for such status, it may help to increase the prevalence of these plans.

### 5.3. Refining Payment Policies

Integrating Medicare and Medicaid payment policies may be an important incentive for D-SNPs to coordinate care and deliver the right mix of Medicare and Medicaid benefits to reduce costs and improve outcomes. However, D-SNP contracts that meet only the minimum MIPPA requirements to coordinate--but not provide Medicaid benefits--offer little opportunity to align Medicare and Medicaid financing. Medicare and Medicaid financing is better integrated when states put D-SNPs at risk for both Medicare and Medicaid benefits. In these arrangements, in addition to Medicare services, D-SNPs may provide Medicaid wraparound benefits or other

Medicaid benefits including LTSS or behavioral health services through companion MLTSS plans (Archibald & Kruse, 2015). This approach creates an incentive for D-SNPs to clinically and financially integrate Medicaid benefits (MedPAC, 2013).

The greatest financial incentives for integrated D-SNP programs may occur when states require D-SNPs to become FIDE SNPs. FIDE SNPs are at risk for the full range of Medicare and Medicaid services including LTSS; in some cases, behavioral health coverage may not be included when states carve out behavioral health services from its Medicaid managed care contracts.

Following is a policy option that could refine D-SNP payment policies and thus create additional incentives for states and MA organizations to invest in D-SNP-based integration models:

- **Policy Option 11: HHS could explore ways to make the FIDE SNP frailty payment adjuster available at the beneficiary level rather than the plan level.**

**Rationale:** Medicare payments to D-SNPs are calculated based on the amount bid by the plan and a risk adjustment factor that accounts for enrollees' demographic characteristics and prior health conditions. A FIDE SNP may also receive an additional frailty adjustment payment if the plan has similar average levels of frailty to the PACE. Frailty is measured by the number of activities of daily living with which a sample of plan enrollees require assistance as determined by their self-reported responses to the Health Outcomes Survey or Health Outcomes Survey-Modified (CMS, 2015b).

Because the frailty adjustment is based on the respondents' average score, FIDE SNPs that have a mix of higher and lower need enrollees may not qualify for the frailty adjustment payment. For example, in states that allow D-SNPs (including FIDE SNPs) to enroll both full-benefit and partial-benefit dual eligible individuals, it may be difficult for FIDE SNPs to qualify for the frailty adjuster even though many enrollees require assistance with activities of daily living.

Currently, the Health Outcomes Survey and Health Outcomes Survey-Modified data are collected on only a sample of a plan's enrollees. Plans and states suggested that collecting frailty information on all enrollees would potentially allow FIDE SNPs to receive a frailty adjustment payment for each enrollee who met the criteria and more accurately reflect enrollment of high-need populations. This would create an incentive for plans to pursue the FIDE SNP designation and to enroll more severely disabled beneficiaries.

This policy option may be difficult to implement. Participation in the Health Outcomes Survey and Health Outcomes Survey-Modified is voluntary, and not all beneficiaries respond, so some portion of enrollees' functional status data would be missing even if all enrollees were sampled. More significantly, it would be costly to survey all FIDE SNP enrollees.

See *Appendix C* for additional policy options related to encouraging state and plan investment in D-SNP-based approaches to integration.

## 6. Policy Options to Improve Federal-State Collaboration

Developing close collaboration between the states and CMS is key for growth and improved oversight of integrated D-SNP programs. A handful of states have established routine calls with CMS to support oversight of their D-SNPs, but there is no formal structure in place for joint state and federal oversight of these programs. CMS responds to ad-hoc state requests for guidance and support at both the Regional and Central Office levels, and it also assigns D-SNP-specific Regional Office account managers to work with plans, but it does not have routine mechanisms to consult states about D-SNP policy and operations. In recent years, MMCO has provided direct support to states and worked with the Center for Medicare, the Center for Medicaid and CHIP Services, and states to promote alignment and coordination for D-SNP programs. States agreed that partnering with CMS to develop and improve D-SNP programs was important to program sustainability and high-quality care. States are eager for new opportunities to deepen their collaborative relationships with CMS.

A policy option to improve federal-state collaboration to promote integrated care using D-SNP-based platforms follows:

- **Policy Option 12: HHS could consider offering states with integrated D-SNP programs the opportunity to establish joint CMS/state oversight calls. In addition, in some cases, D-SNPs could also be included on the calls.**

**Rationale:** Each of the 12 states conducting demonstration under the Financial Alignment Demonstrations and the State of Minnesota for its *Minnesota Demonstration to Align Administrative Functions for Improvements in Beneficiary Experience* have a joint call with CMS regarding oversight of their demonstrations. Both CMS staff and state Medicaid staff report that these calls have been very useful and productive. In addition, CMS established calls with Arizona for review of its D-SNP-based integrated care program and has indicated that it would be willing to conduct similar calls with other states. Joint calls may also be a mechanism to directly engage with D-SNPs on a periodic basis to address questions and raise considerations related to overall program operation and oversight.

See *Appendix C* for additional policy options related to improving federal and state collaboration.

## 7. Conclusion

The policy options listed in this report may help HHS and states to advance Medicare-Medicaid integration for dual eligible beneficiaries through D-SNPs. Nonetheless, there are several overarching issues regarding D-SNPs that should be considered in assessing these policy options.

- **Lack of Data Showing that D-SNPs Improve Outcomes.** To date, there has been little comparative outcomes data showing that D-SNPs deliver better care for dual eligible beneficiaries than either regular MA plans or the fee-for-service delivery systems. Although recently published studies found that D-SNP-based integrated care programs can have positive impacts on outcomes (Anderson et al., 2016; Health Management Associates, 2015), more data are needed from other states using different integration models, including the Financial Alignment Initiative demonstrations. Moreover, some stakeholders have questioned the use of capitated managed care programs for vulnerable populations out of concern that narrower provider networks and reduced reimbursement rates may create a barrier to access and adversely affect the quality of care (Solomon, 2012). CMS and states may want to consider collecting comparative outcomes data to determine which delivery system best serves dual eligible beneficiaries.
- **Beneficiaries and Providers Must See Value in Integrated Care.** Dual eligible beneficiaries used to receiving care under a fee-for-service system will need to see a clear value in enrolling in an integrated managed care plan. Given that many of these individuals have several chronic care, functional support, and social needs, maintaining access to the providers with whom they may have longstanding relationships can also be a very important factor in their willingness to accept a new system of care. Avoiding disruptions in care should be a key goal for all states in implementing managed care for this population. For many providers, particularly Medicaid HCBS providers, participation in an MLTSS program may be their first experience outside of the fee-for-service environment. They too will need to see clear value for their clients in an integrated care program.
- **D-SNP-Based Models May Not Work Well in Rural Areas or States without Medicaid Managed Care.** States or service areas that do not have Medicaid managed care programs are a relatively less fertile environment for D-SNP expansion or enrollment growth. Insurers value the opportunity to obtain a range of public contracts in a market, and when they cannot offer a continuum of products, they may have less incentive to offer D-SNPs. In addition, current MA network standards may prevent D-SNPs from serving rural areas. This makes it particularly difficult for states with MLTSS programs in which plans are required to also offer D-SNPs. Tailoring network adequacy requirements to the specific needs of D-SNP enrollees may help to ameliorate this problem, but more creative approaches also may be needed. For example, greater use of telemedicine may allow D-SNPs to incorporate more providers into their networks in rural or other physician shortage areas.

- **Inability for States to Share in Medicare Savings.** One significant obstacle to integrated care programs is that although they may lower Medicare costs through fewer hospitalizations and emergency department visits, states have been unable to financially benefit from these savings and may see their costs rise for Medicaid-covered LTSS and behavioral health services. Without a mechanism for sharing the Medicare savings and the program investments, as is built into the ongoing Financial Alignment Initiative demonstrations, states may see little benefit in pursuing D-SNP-based integrated care models.

In the last few years, several states, health plans, and the Federal Government have increased their efforts to overcome misalignments in Medicare and Medicaid to address some of the challenges that hindered D-SNPs from more effectively coordinating care for dual eligible beneficiaries. This report has outlined policy options that could be pursued by HHS and states to overcome remaining misalignments in Medicare and Medicaid administrative processes. The report also describes several policy options that could increase states' and health plans' investment in D-SNP-based integration models and improve federal-state collaboration in the creation and oversight of these models.

States at the leading edge of Medicare-Medicaid integration believe that D-SNPs have potential to improve the care of dual eligible individuals. They are eager to work with their health plans and federal partners to enhance D-SNP-based integrated care programs to serve this highly vulnerable population. The policy options provided in this report may help states and HHS to prioritize their efforts in advancing integrated care through D-SNPs.

## Appendix A. Policy Options for HHS and States to Enhance Medicare-Medicaid Integration in D-SNPs

Topic Area	Policy Options
<b>Network Standards and Reviews</b>	<ul style="list-style-type: none"> <li>▪ <b>HHS</b> could work with states to develop D-SNP-specific network adequacy standards and processes that: (1) provide greater flexibility in the application of Medicare time and distance standards while ensuring that any tailored requirements meet the needs of the enrolled population; (2) consider the availability of Medicaid’s non-emergency medical transportation benefit when assessing network adequacy for individuals who would depend on this assistance; (3) give state Medicaid officials the option to participate in CMS reviews of integrated D-SNP service area expansions and exception requests; and (4) review provider networks at the D-SNP level rather than the contract level when the MA contract includes non-D-SNP products.</li> </ul>
<b>Care Management</b>	<ul style="list-style-type: none"> <li>▪ <b>HHS</b> could promote greater integration of the MA Model of Care requirements with state care management requirements for D-SNP-based programs by allowing states to include Medicaid care management requirements in the D-SNP Model of Care. The development of a formal process for inclusion of Medicaid requirements would allow states and D-SNPs to create a comprehensive Model of Care for D-SNP-based integrated programs. In addition to formalizing a state process, HHS and states could work together to consider how to better understand varying care management activities for dual eligible beneficiaries enrolled in D-SNPs by developing audit guidance that accounts for state-specific requirements that have been added to the Model of Care. Finally, CMS could review the impact of its requirement for contract-level Model of Care submissions on states’ and health plans’ alignment efforts.</li> </ul>
<b>Marketing</b>	<ul style="list-style-type: none"> <li>▪ <b>States</b> could modify some of their specific Medicaid managed care marketing restrictions to align with Medicare practices.</li> <li>▪ <b>States</b> could coordinate with D-SNPs on beneficiary education and outreach activities to help beneficiaries understand the value of integrated programs.</li> <li>▪ <b>HHS</b> could allow joint state/CMS review of marketing materials and explore opportunities for states to review materials via the CMS HPMS.</li> </ul>

Topic Area	Policy Options
<b>Beneficiary and Provider Notices</b>	<ul style="list-style-type: none"> <li>▪ <b>HHS</b> could work with states to develop a set of integrated beneficiary and provider materials exclusively for D-SNP-based programs. In addition, CMS could allow for state review/comment on beneficiary notification materials before templates are finalized, changes to instructions are made, or guidance is issued by CMS to D-SNPs on use of integrated notices.</li> <li>▪ <b>HHS</b> could consider state input on special language and literacy needs of dual eligible beneficiaries when developing beneficiary notices.</li> </ul>
<b>Data Collection and Quality Measurement</b>	<ul style="list-style-type: none"> <li>▪ <b>States</b> could provide D-SNPs with data on beneficiaries’ Medicaid or Medicare service utilization history to support initial enrollee risk stratification and ongoing care management efforts.</li> <li>▪ <b>HHS</b> could provide MA encounter data to states as it becomes available rather than states having to request it from plans.</li> <li>▪ <b>HHS</b> could continue its efforts to develop quality measures more relevant to dual eligible beneficiaries, including measures of quality of life, care coordination, LTSS, and behavioral health services.</li> <li>▪ <b>States</b> could streamline their Medicaid managed care performance measures to ensure that they are as similar as possible to the measures used by Medicare for D-SNPs, as appropriate.</li> </ul>
<b>Appeals and Grievances</b>	<ul style="list-style-type: none"> <li>▪ <b>HHS</b> could change the notification process concerning benefit denial so that beneficiaries in aligned programs would not receive a denial notice if a service is denied by the MA plan but covered by Medicaid.</li> </ul>

Topic Area	Policy Options
<p><b>Investment in D-SNP-Based Programs</b></p>	<ul style="list-style-type: none"> <li>▪ <b>HHS</b> could lift the temporary moratorium on new approvals for seamless conversion submitted by D-SNPs.</li> <li>▪ <b>States</b> could align their Medicaid annual open enrollment period with the Medicare open enrollment period to encourage selection of integrated or aligned Medicare and Medicaid health plans.</li> <li>▪ <b>HHS</b> could consider increasing guidance and information sharing with states about the application process, review criteria, and associated incentives for plans to achieve designation as a FIDE SNP or a Highly Integrated D-SNP, including which plans have achieved those designations.</li> <li>▪ <b>HHS</b> could explore ways to make the FIDE SNP frailty payment adjuster available at the beneficiary level rather than the plan level.</li> <li>▪ <b>HHS</b> could consider opportunities to provide flexibility with MA contracting timelines for states developing fully integrated programs.</li> <li>▪ <b>HHS</b> could make enrollment periods for dual eligible beneficiaries in D-SNPs comparable to those for other Medicare beneficiaries enrolled in MA plans.</li> <li>▪ <b>HHS</b> could explore mechanisms to allow states to share in savings achieved through D-SNP-based integrated care programs.</li> <li>▪ <b>HHS</b> could develop guiding materials to assist states that are at varying stages of design and implementation of D-SNP-based integrated care programs (i.e., negotiating their first MIPPA contracts with plans; moving their contracts beyond MIPPA minimums; developing MLTSS programs).</li> </ul>
<p><b>Communication Between CMS and States</b></p>	<ul style="list-style-type: none"> <li>▪ <b>HHS</b> could consider offering states with integrated D-SNP programs the opportunity to establish joint CMS/state oversight calls. In addition, in some cases, D-SNPs could be included on the calls.</li> <li>▪ <b>HHS</b> could consider developing additional capacity to: (a) build Medicare staff understanding of Medicaid managed care requirements; and (b) informally gather state Medicaid agency perspectives on barriers to alignment.</li> <li>▪ <b>HHS</b> could consider opportunities for CMS to expand its support of D-SNP based alignment.</li> </ul>

## **Appendix B. Subject Matter Experts, Case Study Interviewees, and State Officials**

### **Subject Matter Experts**

- Catherine Anderson, Vice President of State Programs, UnitedHealthcare Community & State
- Rich Bringewatt Co-Founder and Chair, SNP Alliance and Pam Parker, Medicare-Medicaid Integration Consultant, SNP Alliance
- Rhys Jones, Vice President Medicaid Advocacy; Mark Hamelburg, Senior Vice President, Federal Programs; and Howard Weiss, Vice President, Federal Programs, America's Health Insurance Plans
- Staff from CMS's Center for Medicare (Linda Anders, Kathryn Coleman, Martha Hennessey, Wanda Pigatt-Canty, Erica Sontag, Scott Sturiale, Tim Roe, Nishamarie Sherry) and Medicare-Medicaid Coordination Office (Vanessa Duran, Paul Precht, Marla Rothouse)
- Jim Verdier, Senior Fellow, Mathematica Policy Research, Inc.

### **Case Study Interviewees (State Agencies and D-SNPs)**

- **Arizona**
  - Arizona Health Care Cost Containment System
  - Bridgeway Health Solutions (Centene)
  - Mercy Care Advantage
  - UnitedHealthcare
  - University Care Advantage
- **Massachusetts**
  - Massachusetts Executive Office of Health and Human Services
  - Commonwealth Care Alliance
  - Senior Whole Health
  - Tufts Health Plan
  - UnitedHealthcare
- **Minnesota**
  - Minnesota Department of Human Services
  - HealthPartners
  - PrimeWest
  - UCare

- **New Jersey**
  - New Jersey Department of Human Services
  - AmeriGroup New Jersey
  - HealthFirst Health Plan
  - UnitedHealthcare
- **Tennessee**
  - Bureau of TennCare
  - AmeriGroup Tennessee
  - BlueCare Tennessee
  - UnitedHealthcare

### **In-Person Meeting Attendees**

- **Arizona:** Tom Betlach, Director, Arizona Health Care Cost Containment System
- **Massachusetts:** Susan Ciccariello, Assistant Director for Coordinated Care, Massachusetts Executive Office of Health and Human Services
- **Minnesota:** Sue Kvendru, Special Needs Purchasing Coordinator and Gretchen Ulbee, Special Needs Purchasing Manager, Minnesota Department of Human Services
- **New Jersey:** Elizabeth Wood, Director of Dual Integration, New Jersey Department of Human Services
- **New Mexico:** Tallie Tolen, Long-Term Services and Supports Bureau Chief, New Mexico Human Services Department
- **Pennsylvania:** Kevin Hancock, Chief of Staff, Office of Long-Term Living, Pennsylvania Department of Human Services
- **Tennessee:** Patti Killingsworth, Assistant Commissioner and Chief of Long-Term Services and Supports, Tennessee Bureau of TennCare
- **Texas:** Juliet Charron, Senior Advisor, Texas Health and Human Services Commission
- **Virginia:** Karen Kimsey, Deputy Director for Complex Care Service and Tammy Whitlock, Division Director for Integrated Care and Behavioral Services, Virginia Department of Medical Assistance Services
- **Wisconsin:** Curtis Cunningham, Administrator, Division of Long-Term Care, Wisconsin Department of Health Services

## Appendix C. Additional Policy Options

Following are additional policy options for HHS and states that may be more challenging to implement or are lower priority than the options identified in the main body of the report.

### Marketing

- **Policy Option 13: HHS could allow joint state/CMS review of marketing materials and explore opportunities for states to review materials via the CMS HPMS.**

**Rationale:** Allowing for joint CMS and state review of marketing material may help states and CMS to review D-SNPs' marketing materials more quickly. Minnesota has had positive experiences using this process for its *Minnesota Demonstration to Align Administrative Functions for Improvements in Beneficiary Experience*. States do not typically have access to the HPMS--the web-based information system that plans use to submit marketing materials and other materials for CMS's review--but Minnesota has been granted access to this system as part of its demonstration program. The states and D-SNPs interviewed for the case studies believed that giving states access to the HPMS would greatly streamline the review of marketing materials. In addition to Minnesota, CMS has facilitated joint review processes in the Financial Alignment Initiative Demonstrations and has recently begun expanded use of joint review for the PACE.

One difficulty with implementing a joint review process is the constraint within the HPMS that precludes the review of marketing or other materials for multiple plans by different methods under one overall contract. For example, if a contract contains one MA plan and a D-SNP, HPMS is not configured to allow the MA plan materials to be reviewed by CMS only and the D-SNP materials to be reviewed by both a state and CMS. CMS staff indicated that a subregulatory policy change would be needed to overcome this issue, and some alterations to website would also be required. Marketing materials for Minnesota's D-SNPs can be jointly reviewed by the state and CMS within the same timeframe because all D-SNPs in that state are in single-plan contracts.

### Beneficiary and Provider Notices

- **Policy Option 14: HHS could consider state input on special language and literacy needs of dual eligible populations when developing beneficiary notices.**

**Rationale:** Medicare has no specific reading level requirements for beneficiary materials other than that publications, forms, and publicly distributed documents should be written in a "clear, concise, and well-organized manner" (CMS, 2016g). Federal Medicaid rules require that materials must be written "in a manner and format that may be easily understood" and available in formats that account for special needs, such as visual limitations or limited reading proficiency (42 CFR §438.10(b) and (d)). However, most states impose more stringent reading level requirements. For example, California and Minnesota require that Medicaid beneficiary correspondence and marketing materials be written at or below a sixth-grade or seventh-grade reading level, respectively. States

suggested that the reading levels of the Medicare-related portions of standardized model materials for integrated programs should be on par with their requirements for Medicaid materials.

## Data Collection and Quality Measurement

- **Policy Option 15: HHS could provide MA encounter data to states as it becomes available rather than states having to request data from plans.**

**Rationale:** Some states receive encounter data directly from their managed care plans, which they use for program oversight and rate setting. Others states do not have access to encounter data, but receive Medicare fee-for-service data from CMS's State Data Resource Center. States expressed an interest in seeing the MA encounter data that CMS has been collecting. They hope that these data might be cleaner and more complete if they came from CMS.

- **Policy Option 16: HHS could continue efforts to develop quality measures more relevant to dual eligible beneficiaries, including measures of quality of life, care coordination, LTSS, and behavioral health services.**

**Rationale:** States, plans, and subject matter experts all commented that most existing measures of quality for D-SNPs or other integrated care programs do not effectively measure enrollees' quality of life, the quality of care coordination, or the quality of LTSS and behavioral health services--the activities and services most central to the needs of dual eligible beneficiaries.

Several initiatives are underway to address this issue. CMS has contracted with the National Committee for Quality Assurance to develop measures that evaluate the quality of care provided by D-SNPs (Archibald et al., 2015). In addition, in collaboration with the Center for Medicaid and CHIP Services, MMCO recently launched an effort to develop measures in the areas of care coordination, MLTSS, community integration, and substance use disorders (CMS MMCO, 2016b). Finally, the new Medicaid managed care final rule contains requirements that may improve alignment of quality measurement and strengthen requirements for quality measurement and ratings for Medicaid managed care plans (CMS, 2016h). For example, states must adopt a Medicaid managed care quality rating system developed by CMS (CMS, 2016h).

- **Policy Option 17: States could streamline their Medicaid managed care performance measures to ensure that they are as similar as possible to the measures used by Medicare for D-SNPs, as appropriate.**

**Rationale:** States have taken proactive steps to address the need to integrate and streamline quality reporting for dual eligible individuals. In 2016, Minnesota D-SNPs administered a combined Medicare and Medicaid Consumer Assessment of Healthcare Providers and Systems survey to dual eligible beneficiaries, rather than sending two separate surveys. States could further examine their Medicaid managed care performance

measures to ensure that they do not contain language that makes them unnecessarily inconsistent with Medicare measures.

### **Investment in D-SNP-Based Approaches to Integration**

- **Policy Option 18: HHS could consider opportunities to provide flexibility with MA contracting timelines for states developing fully integrated programs.**

**Rationale:** States attempting to launch MLTSS programs which can be aligned with companion D-SNPs may face difficulty working within existing MA timelines. MA organizations that want to create new plans (including D-SNPs) must submit a Notice of Intent to Apply in November--14 months prior to the contract year in which it would launch (e.g., notices were due in November 2016 for MA plans that would launch in January 2018). Because this timeline does not always correspond to states' MLTSS contracting timelines, particularly if a state is seeking responses to a new procurement, states that want to achieve D-SNP/MLTSS plan alignment may be limited to choosing among MLTSS bidders that have existing D-SNP contracts. Currently, plans that would otherwise want to bid on an MLTSS Request for Proposals and participate in an integrated program would be prohibited from doing so if they did not submit a Notice of Intent to Apply within the required timeframe. Although states could try to align their contracting cycles with MA requirements, HHS could also consider creating an exceptions mechanism for MA organizations to create D-SNPs if they are preliminarily selected to provide MLTSS plan coverage in an integrated program, pending the approval of a D-SNP product. Alternatively, states could allow MLTSS plans 2 years to obtain a D-SNP contract.

- **Policy Option 19: HHS could make enrollment periods for dual eligible beneficiaries in D-SNPs comparable to those for other Medicare beneficiaries enrolled in MA plans.**

**Rationale:** During Medicare's open enrollment period, which occurs from October 15 to December 7 each year, beneficiaries can enroll in or switch MA plans. For the remainder of the year, Medicare beneficiaries are locked into their plans unless they wish to disenroll and return to traditional Medicare. In contrast, dual eligible beneficiaries have access to a Special Enrollment Period, which means that they may enroll in or disenroll from MA plans (including D-SNPs) in any month. The effective date of a change in plan made using this Special Enrollment Period is the first of the month following receipt of the enrollment or disenrollment request (CMS, 2016i).

Although the Special Enrollment Period is a consumer protection that allows dual eligible beneficiaries to disenroll from plans with which they are dissatisfied, it also creates potential disruptions and gaps in care for these vulnerable beneficiaries. Some states support "enrollment equity" between dual eligible beneficiaries and the overall Medicare population. The National Association of Medicaid Directors (NAMD) has recommended that Congress grant the Secretary of HHS the authority to develop unified enrollment

rules for D-SNPs that would require a longer timeframe in which beneficiaries had to remain in a D-SNP plan in which they voluntarily enrolled (NAMMD, 2013).

State officials had mixed opinions on this policy option. Some have found that dual eligible beneficiaries switched plans frequently. Reasons cited by states for some beneficiaries switching plans included pressure from providers, illnesses that impair decision making, and individuals with opioid addictions trying to obtain more prescriptions.<sup>16</sup> The state officials suggested that retaining dual eligible beneficiaries in D-SNPs for a longer period--perhaps 90 or 180 days--would give the plans more opportunity to engage with enrollees and establish care coordination and continuity of care. One state described how it requires D-SNPs to counsel enrollees about potential risks of switching plans, such as disrupting continuity of care. In contrast, other states have not experienced much churn in their D-SNP enrollment and noted that beneficiary advocates would be strongly opposed to any changes in the Special Enrollment Period for dual eligible beneficiaries.

- **Policy Option 20: HHS could explore mechanisms to allow states to access savings achieved through D-SNP-based integrated care programs.**

**Rationale:** Historically, states have been reluctant to invest in integrated care initiatives because most of the savings they might generate would come from reduced acute care costs accrue to Medicare as opposed to states' Medicaid programs. For example, a recent study of the D-SNP-based Minnesota Senior Health Options program found significant reductions in Medicare-covered hospitalizations and emergency department visits (Anderson et al., 2016). The Financial Alignment Initiative demonstrations allow states to share in the savings generated by their capitated or managed fee-for-service model programs. States would be interested in a similar shared saving mechanism for D-SNP-based programs. HHS could explore ways to adapt Medicare value-based shared savings models so that states investing in integrated D-SNP programs might benefit financially, which could encourage more states to pursue D-SNP-based integrated care programs.

- **Policy Option 21: HHS could develop materials to assist states that are at varying stages of design and implementation of D-SNP-based integrated care programs (i.e., negotiating their first MIPPA contracts with plans; moving their contracts beyond MIPPA minimums; developing MLTSS programs).**

**Rationale:** State officials we interviewed suggested that they, and all states, needed additional technical assistance to support their integration efforts. They suggested that CMS and its technical assistance contractors could provide information tailored to states at different levels of readiness that would identify best practices, provide sample contract language, and map out timelines and strategies for next steps.

---

<sup>16</sup> Dissatisfaction with the health plan was not among the top reasons reported by states for dual eligible beneficiaries switching plans.

## Collaboration Between CMS and States

- **Policy Option 22: HHS could consider developing additional capacity to: (a) build Medicare staff understanding of Medicaid managed care requirements; and (b) informally gather state Medicaid agency perspectives on barriers to alignment.**

**Rationale:** Improving Medicare staff’s knowledge of Medicaid requirements and obtaining state perspectives could facilitate decisions about D-SNP operations, functions, and plan oversight (e.g., marketing, enrollment, network adequacy, appeals, performance measurement) that better reflected states’ operating environments and dual eligible beneficiaries’ needs. These educational efforts could include CMS Regional Office staff, who are often the CMS officials collaborating most closely with states on D-SNP contracting.

- **Policy Option 23: HHS could consider opportunities for CMS to expand its support of D-SNP-based alignment.**

**Rationale:** Several entities within CMS are involved in advancing integrated care for dual eligible beneficiaries. MMCO, since its creation in 2011, has actively supported states’ efforts to provide more integrated, coordinated care for dual eligible individuals through a variety of integration platforms--Financial Alignment Initiative demonstrations, D-SNPs, the PACE. Representatives from the states agreed that CMS could expand support for states’ D-SNP-based integration efforts. This view is also supported by several other groups including the U.S. Senate Finance Committee, the NAMD, and the SNP Alliance (NAMD, 2013; SNP Alliance, 2015; U.S Senate Finance Committee, 2016).
