Preliminary Comments Development Team (PCDT) Presentation:

Improving Care Transition Management in Population-Based Models

Walter Lin, MD, MBA (Lead)
Lindsay Botsford, MD, MBA
Lauran Hardin, MSN, FAAN
James Walton, DO, MBA
Jennifer Wiler, MD, MBA

June 12, 2023
Meeting Objectives

How can financial incentives be structured to incentivize improvements in care transition management throughout the Medicare program?

– Opportunities and barriers
– Effective care delivery model innovations and strategies
– Payment strategies
– Performance metrics
Agenda

Background

Analysis of TCM Services Among FFS Providers

Components of Effective Care Transitions

Care Transitions Payment Model Challenges
Several of PTAC’s previous public meetings have addressed issues related to improving care coordination, care delivery model design, and primary and specialty care integration in Alternative Payment Models (APMs).

PTAC has deliberated on the extent to which 28 proposed physician-focused payment models (PFPMs) met the Secretary’s 10 regulatory criteria, including *Integration and Care Coordination.*

Many of these proposals raised issues and challenges regarding managing care transitions between settings.

* Nearly all of the 35 proposals that have been submitted to PTAC addressed the potential impact on costs and care coordination, to some degree – including at least 20 proposals that addressed issues related to facilitating transitions and coordinating care across settings in advanced primary care models (APCMs) and episode-based or condition-specific models. Please see the Appendix for additional information.
Highlights of Preliminary Working Definitions

Care transitions
– Movement of a patient from one setting of care to another
– May occur between many settings, including the community or the patient’s home

Care transition management
– Ongoing support of patients and their families as they navigate care and relationships among more than one provider, health care setting, and/or health care service (within the same or different facilities)
– May include many tailored interventions before, during, and after the transition
Objectives of Effective Care Transitions

Improve:

- Health Care Quality and Patient Outcomes
- Patient Experience
- Provider Experience
- Population Health
- Spending

Components of Effective Care Transition Management Models

- Screening
- Medication reconciliation
- Communication and collaboration
- Timely follow-up visits
- Patient and caregiver education
- Other tools and resources
  - Discharge checklist, transition coach, patient-centered health record, condition-specific red flags
Effective transfer of health information is key to successful patient handoffs.

Example of Selected Care Transitions for a Patient with Stroke

EMS transports patient to hospital

Patient admitted to hospital

Patient discharged to post-acute care (PAC) facility

Patient discharged to home (with or without home health services)

Patient receives ongoing outpatient care in the community
Care Setting Transitions Represent Risk of Patient Harm: Example Options for a Patient with Stroke

- Admission to acute care hospital from community
  - Transferred to another acute care hospital
  - Transferred to Skilled Nursing Facility (SNF)
  - Transferred to Inpatient Rehabilitation Facility (IRF)
  - Transferred to Long-Term Care Hospital (LTCH)
  - Transferred to long-term care setting
  - Discharged to community for outpatient care,* with or without home health services
  - Readmitted to acute care hospital
  - Transferred to another SNF
  - Transferred to IRF
  - Transferred to LTCH
  - Transferred to long-term care setting
  - Discharged to community for outpatient care,* with or without home health services
  - Readmitted to SNF
  - Transferred to IRF
  - Transferred to LTCH
  - Transferred to long-term care setting
  - Discharged to community for outpatient care,* with or without home health services
Background

Analysis of TCM Services Among FFS Providers

Components of Effective Care Transitions

Care Transitions Payment Model Challenges
Total Medicare Beneficiaries: ~64 million
- 58 million with both Part A and Part B
- 53% in Traditional Medicare
- More than half (17.5 million) of the beneficiaries in Traditional Medicare were not in ACOs or similar models

Takeaways from Prior Studies on Care Transition Interventions

• Evidence suggests that care transition interventions are associated with substantial cost savings without reducing access or quality.
  – The Care Transitions Intervention, a patient-centered coaching intervention, was associated with 22% lower total health care costs at six months.
  – The University of Pennsylvania Transitional Care Model was associated with lower average costs per patient, even when accounting for costs of transitional care services.

Low Uptake of Medicare Transitional Care Management (TCM) Services Among Fee-For-Service (FFS) Providers

- 2013: Medicare introduced two TCM codes to reimburse for assisting patients when moving from inpatient to the community.

- Prior studies show that uptake of TCM codes has been slow.

- Factors influencing TCM code uptake may include:
  - The relative cost vs. financial incentives of providing TCM services.
  - Lack of interoperability between electronic health records.
  - Eligibility and coinsurance requirements.

Reference: Analysis of 2019 Medicare Fee-for-Service (FFS) Claims for Chronic Care Management (CCM) and Transitional Care Management (TCM) Services, March 1, 2022, available at https://aspe.hhs.gov/sites/default/files/documents/41fd0a9afffdc5f36bca0656b4f4ca6b/CCM-TCM-Descriptive-Analysis.pdf
Higher Use of Medicare TCM Services by ACO-Affiliated Physician Practices

In 2019, of all practices in the U.S. with at least one attributed beneficiary potentially eligible for TCM, 45.6 percent billed TCM for at least one potentially eligible beneficiary, and these practices billed for an average of 22.6 percent of their potentially eligible beneficiaries.

Primary care practices and larger practices were more likely to bill for providing TCM services.

Practices that were affiliated with an ACO:

- Were more likely to bill for providing TCM to at least one attributed beneficiary who was potentially eligible for TCM services (65.0% vs. 41.3% for practices not affiliated with an ACO).
- Billed for higher proportions of their beneficiaries who were potentially eligible for TCM.*

Medicare TCM services were likely not provided to many FFS beneficiaries who might have benefitted from them.

* In the analysis, potential eligibility was determined based on analysis of claims-identified chronic conditions or discharges from hospitals, skilled nursing facilities, and community mental health centers, and does not include physician assessment of patient suitability or appropriateness for TCM services.

Reference: Analysis of 2019 Medicare Fee-for-Service (FFS) Claims for Chronic Care Management (CCM) and Transitional Care Management (TCM) Services, March 1, 2022, available at [https://aspe.hhs.gov/sites/default/files/documents/41fd0a9afffd5f36bca0656b4f4ca6b/CCM-TCM-Descriptive-Analysis.pdf](https://aspe.hhs.gov/sites/default/files/documents/41fd0a9afffd5f36bca0656b4f4ca6b/CCM-TCM-Descriptive-Analysis.pdf).
Impact of Medicare TCM Services on Hospital Readmissions, Total Cost of Care (TCOC), and Healthy Days at Home

Although uptake of TCM services may be suboptimal, a new analysis has found that use of TCM services within 30 days of hospital discharge in 2018 and 2019 is associated with significant improvements in outcomes during the 31 to 60 day period following discharge for:

- Hospital readmissions – a 5.6% decrease (-0.6 percentage points);
- TCOC – a 7.8% decrease per episode (-$236.11/episode); and
- Healthy days at home – a 1.3% increase (+0.32 days).*

There was also a significant decrease in TCOC during the 1 to 60 day period following discharge (a 13.7% decrease per episode [-$997.10/episode]).

Future direction: strategies for improving TCM uptake

Note: Study conducted using 2018 and 2019 Medicare fee-for-service claims. For this analysis, the Treatment Group included patients who received TCM service within 30 days of acute care hospital inpatient discharge, and the Comparison Group included patients who did not receive TCM service within 30 days of acute care hospital inpatient discharge. * Unless otherwise noted, measures capture spending, utilization, and healthy days at home in days 31-60 following acute care hospital inpatient discharge. Unit of analysis: episodes that begin from a qualifying discharge eligible for TCM after a short-term acute care hospital stay and end 60 days after discharge. Results are statistically significant at P≤0.01. Report forthcoming.
Takeaways from Studies on Medicare TCM Services

• Practices that were affiliated with a MSSP ACO were more likely to bill for TCM services.

• Use of TCM services within 30 days of hospital discharge in 2018 and 2019 is associated with significant improvements in outcomes.

Implications?

Selected Facilitators of Care Transition Management

Collaboration
- Interdisciplinary, team-based care (including the care coordination nurse)
- Coordination between health care and community services
- Information transfer and management
- Face-to-face communication

Tailoring services
- Patient/caregiver education
- Patient/caregiver care planning
- Evaluation and modification

Staff buy-in
- Prioritizing and championing services

Care Delivery Challenges Related to Improving Management of Transitions Between Settings

- Communication breakdown
- Unplanned discharges
- Disparities in care transition management
- Insufficient health information technology (HIT), infrastructure, and data analytics
- Gaps in access to post-discharge care
- Limited patient awareness of care coordination staff and services
- Workforce availability and staffing turnover
- Lack of accountability

References:
Enablers of Effective Care Transitions

**Policy Goals**
- Value-based care
- Shared risk
- Increased accountability
- Delivery system transformation

**Payment Policy**
- Addressing limitations of current FFS billing
- APMs
- Financial incentives (capitated payments, per beneficiary per month [PBPM] payments, episode-based payments)

**Patients, Providers, and Care Delivery Processes**
- Knowledge of high-quality providers at the point of referral
- Tailored discharge instructions
- Medication reconciliation
- Remote monitoring and timely follow-up
- Communication
- Patient and family/caregiver education
- Closing the referral loop

**Desired Quality and Health Outcomes**
- **Utilization** – improve access/reduce barriers to care, reduce emergency department visits
- **Quality** – reduce readmissions, reduce mortality, increase healthy days at home
- **Spending** – reduce TCOC by shifting care to more appropriate settings and reduce avoidable utilization
- **Equity** – reduce disparities

Less risk  

More risk
Overview of Payment Model Challenges Related to Improving Care Transition Management*

• Limited and/or conflicting financial incentives
• Assigning accountability for care transitions
• Establishing optimal degree of flexibility
• Implementing meaningful performance measures

* This representative list will continue to evolve as the Committee collects additional information from stakeholders.
Limited and/or Conflicting Financial Incentives

- Limitations on who can provide Transitional Care Management
  - Primary care providers (PCPs) vs. specialists
- TCM services reimbursement vs. costs
- Pressures to reduce lengths of stay, discharge patients to less intensive settings, and reduce readmissions
- FFS TCM reimbursement not tied to outcomes

Assigning Accountability for Care Transitions

• No accountability for outcomes or spending under FFS
  – Beneficiaries who are not attributed may experience worse management of care transitions and have poorer outcomes related to care transitions.

• Multiple providers may contribute to care transitions.
  – Attribution based on plurality of services or “first touch” may not account for all contributing providers.

Establishing Optimal Degree of Flexibility

Patient-centered care may necessitate different approaches to care transition management, such as for patients:

- With multiple chronic conditions
- With high or rising risk
- With conditions requiring acute or chronic management
- In underserved areas or with issues in access to care

Patient panel mix may vary substantially across providers and regions.
Possible Care Transitions Performance Measures

Example measures related to the effectiveness of care transitions:

- **Care processes**
  - Medication reconciliation, communication about discharge information

- **Utilization**
  - ED visits, avoidable hospital readmissions, post-acute care stays, home health visits

- **Spending**
  - Total cost of care, setting-specific spending measures

- **Health care outcomes**
  - Mortality, frailty, change in functional status, receipt of follow-up care, healthy days at home

- **Patient-reported outcomes**
  - Patient experience with care
Examples of Technical Issues Affecting Implementation of Meaningful Performance Measures

• Balancing specificity and useability
  – Sample size issues
    • Lower-volume providers
    • Some condition-specific measures

• Data collection burden
  – Capturing patient experience in key domains
    • For example, understanding, preferences, preparedness, care planning
  – Proximity to event and recall bias

• Defining person-centered goals and indicators

• Applicability of absolute or relative scales for providers serving certain populations
Options for Addressing Selected Payment Model Challenges

• Sharing benchmarked financial and performance data in a timely manner
  – Predictive algorithms / risk-stratification data

• Payment design features that shift risk to providers in the traditional fee-for-service environment
  – Tying TCM payments and/or bonuses to outcomes

• Create care models supporting TCM innovation

• Defining and disseminating TCM best practices
PTAC Care Transitions Public Meeting Focus Areas

• Improving care transitions under Medicare FFS
  – Is it possible to tie outcomes related to care transition management under Medicare FFS?

• Exploring why providers in value-based care organizations perform better care transition services

• Improving care transitions under value-based care models
  – Leveraging performance measurement and financial incentives
Appendix A
Examples of Components of Effective Care
Transitions
Examples of Components of Effective Care Transitions

• Improve patient experience
  – Provider Accountability – Shared co-management between discharging and admitting providers; patient/caregiver education
  – Care Delivery Innovation – Implementation of effective, evidence-based care models

• Improve provider experience
  – Administrative Burden – Non-physician staff enter some or all documentation in medical record.
  – Communication – Clearly defined roles, responsibilities, and communication plans
  – Capacity – Physicians as coaches providing care team oversight, expanding non-physician staff roles
  – Infrastructure – Standardize and synchronize workflows for prescription refills

• Improve population health
  – Prevention of Disease Escalation – Identification of and tailored interventions for patients with rising or high risk

Examples of Components of Effective Care Transitions, Continued

• Improve quality
  – Safety – Medication reconciliation, targeted checklists
  – Efficacy – Case management across settings, tailored discharge planning
  – Patient-Centeredness – Advance care planning, discussion of care goals, education, empowerment
  – Timeliness – Availability and access to follow-up care
  – Efficiency – Pre-visit planning and pre-appointment laboratory testing; appropriateness of discharge settings and transition decision-making
  – Equity – Population-specific interventions and measures for racial and ethnic minorities, older adults, individuals who are dually eligible for Medicare and Medicaid, individuals with limited English proficiency (LEP)

Examples of Components of Effective Care Transitions, Continued

• Improve spending
  – Reduce Avoidable Utilization – Avoidable readmissions and ED visits
  – Payment Model Innovation – Changes in fee-for-service billing (chronic care management, advance care planning codes), financial supports (capitated payments, PBPM payments, episode-based payments)

Appendix B
Selected Federal Programs Supporting Care Transitions
Selected Federal Programs Supporting Care Transitions

• Money Follows the Person (MFP; enacted 2006)
  – Initiative to assist states in their efforts to reduce reliance on institutional care while developing community-based long-term care opportunities

• Community-based Care Transitions Program (CCTP; effective April 2011)
  – Created by Section 3026 of the Affordable Care Act
  – Tests models for improving care transitions from the hospital to other settings and reducing readmissions for high-risk Medicare beneficiaries

Selected Federal Programs Supporting Care Transitions, Continued

• Hospital Readmissions Reduction Program (HRRP; effective October 2012)
  – Medicare value-based purchasing program
  – Encourages hospitals to improve communication and care coordination to better engage patients and caregivers in discharge plans and, in turn, reduce avoidable readmissions
  – Section 1886(q) of the Social Security Act sets forth the statutory requirements for HRRP.

• Skilled Nursing Facility Value-Based Purchasing Program (SNF VBP; effective October 2018)
  – Awards incentive payments to SNFs to encourage quality of care improvements
  – Established in Section 215 of the Protecting Access to Medicare Act of 2014 (PAMA)
  – Under the SNF VBP Program, SNFs:
    • Are evaluated by their performance on a hospital readmission measure;
    • Are assessed on both improvement and achievement, and scored on the higher of the two;
    • Receive quarterly confidential feedback reports containing information about their performance; and
    • Earn incentive payments based on their performance.

Appendix C
Care Transition Management Incentives and Activities in Center for Medicare and Medicaid Innovation (CMMI) Models
## Financial Incentives Used in CMMI Models

The following are examples of payment design features that provide flexibility for tailoring care transition management activities to patient/caregiver needs in selected FFS-based APMs.

<table>
<thead>
<tr>
<th>Payment Design Feature</th>
<th>How Payment Design Feature Supports Care Transition Management Activities in Selected Center for Medicare and Medicaid Innovation (CMMI) Models</th>
</tr>
</thead>
</table>
| **Bundled payments**   | **Comprehensive Care for Joint Replacement (CJR) Model** – hospitals are responsible for quality and spending within 90 days of discharge, emphasizing discharge planning, post-discharge care/recovery, and coordination between hospitals and ambulatory care providers (e.g., physical therapists).  
**Bundled Payments for Care Improvement (BPCI) Advanced Model** – participants are responsible for ensuring that the entire health care team (from all care settings) communicates and collaborates on quality and TCOC. |
| **Per beneficiary per month (PBPM) payments** | **Next Generation Accountable Care Organization (NGACO) Model** – NGACOs used data analytics to identify prospectively aligned beneficiaries at risk of hospitalization and engage them through care management, managing care transitions to prevent readmission. |
| **Capitated payments** | **Global and Professional Direct Contracting (GPDC)/ACO Realizing Equity, Access, and Community Health (REACH) Model** – participating and preferred providers can fund non-covered care transition management activities by assuming varying degrees of risk for total care or primary care. |
## Key Characteristics of Selected CMMI Models with Care Transition Management Activities

<table>
<thead>
<tr>
<th>Model</th>
<th>Care Transition Management Activities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comprehensive Primary Care Plus (CPC+)</td>
<td>Participating practices have access to a robust learning system and feedback to guide future decision-making, improve care coordination, and enhance care management for beneficiaries identified as high-risk.</td>
</tr>
<tr>
<td>Accountable Care Organization Realizing Equity, Access, and Community Health (GPDC/ACO REACH)</td>
<td>Participants within the ACO must have a robust plan for meeting the needs of their patients with Medicare FFS in underserved communities and make measurable changes to address health disparities.</td>
</tr>
<tr>
<td>Next Generation Accountable Care Organization (NGACO)</td>
<td>Certain benefit enhancements (BEs) available to participants are relevant to care transitions, such as a post-discharge home visit BE or a care management home visit BE.</td>
</tr>
<tr>
<td>Primary Care First Model Options (PCF)</td>
<td>Episodic care management services, such as practices following up after ED visits and hospitalizations; improving care transitions and adherence to post-discharge care plans, resulting in fewer readmissions, ED visits, or both; providing transportation cost assistance</td>
</tr>
<tr>
<td>Accountable Health Communities Model (AHC)</td>
<td>Coordinated referrals from clinical delivery sites (e.g., physician practices, behavioral health providers, clinics, hospitals) to community services organizations that can help address unmet health-related social needs (HRSNs), including housing, food, violence intervention programs, utilities, or transportation</td>
</tr>
<tr>
<td>Bundled Payments for Care Improvement Advanced (BPCI Advanced)</td>
<td>Designates participant as leading engagement and coordination efforts</td>
</tr>
<tr>
<td>Comprehensive End-Stage Renal Disease (ESRD) Care (CEC)</td>
<td>Encourages and supports patient-centered care that addresses health needs both in and outside the dialysis clinic; designates ESRD Seamless Care Organizations (ESCOs) as facilitators for care coordination</td>
</tr>
<tr>
<td>Comprehensive Care for Joint Replacement (CJR)</td>
<td>Providers develop a tailored recovery plan for each patient, including details such as treatment preferences; the CMMI provides tools for analyzing spending and utilization data and encourages sharing of best practices through a learning and diffusion program; certain Medicare requirements are waived to encourage flexibility.</td>
</tr>
</tbody>
</table>
## Key Characteristics of Selected CMMI Models with Care Transition Management Activities, Continued

<table>
<thead>
<tr>
<th>Model</th>
<th>Care Transition Management Activities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enhancing Oncology Model (EOM)</td>
<td>Supports personalized services; considers patients’ preferences and goals for treatment, HRSNs, and psychosocial health needs; engages patients regularly and proactively; requires redesign activities, such as 24/7 access to care, patient navigation, care planning, use of evidence-based guidelines, use of electronic Patient Reported Outcomes (ePROs), screening for HRSNs, use of data for quality improvement, and certified electronic health record (EHR) technology.</td>
</tr>
<tr>
<td>ESRD Treatment Choices (ETC)</td>
<td>Offers patients education to support treatment options</td>
</tr>
<tr>
<td>Expanded Home Health Value-Based Purchasing (Expanded HHVBP)</td>
<td>Provides incentives for better quality care with greater efficiency, studies new potential quality and efficiency measures for appropriateness in the home health setting, and enhances the current public reporting process</td>
</tr>
<tr>
<td>Frontier Community Health Integration Project Demonstration (Frontier Community)</td>
<td>Enhanced payments for certain services designed to improve access to care for patients and increase the integration and coordination of care among providers within the community; goal to reduce avoidable hospitalizations, admissions, and transfers</td>
</tr>
<tr>
<td>Home Health Value-Based Purchasing (HHVBP)</td>
<td>Leverages the successes and lessons learned from previous value-based purchasing programs and demonstrations to shift from volume-based payments to a value-based model designed to promote the delivery of higher-quality care to Medicare beneficiaries</td>
</tr>
<tr>
<td>Independence at Home Demonstration (IAH)</td>
<td>Medical practices led by physicians or nurse practitioners will provide primary care home visits tailored to the needs of beneficiaries with multiple chronic conditions and functional limitations; practices adopted formal risk-stratification processes to identify patients at high risk for hospitalization or ED utilization for intervention (additional care management services, such as frequent check-in calls); documenting medication reconciliation.</td>
</tr>
<tr>
<td>Integrated Care for Kids (InCK)</td>
<td>A child-centered local service delivery and state payment model that aims to reduce expenditures and improve the quality of care for children under 21 years of age with Medicaid coverage through prevention, early identification, and treatment of behavioral and physical health needs</td>
</tr>
<tr>
<td>Initiative to Reduce Avoidable Hospitalizations Among Nursing Facility Residents: Phase 2</td>
<td>Nursing facilities partnered with Enhanced Care and Coordination Provider (ECCP) organizations to provide on-site training for staff on providing preventive services and improving the assessment and management of medical conditions to reduce avoidable hospitalizations. For example, ECCPs provided medication management and end-of-life support.</td>
</tr>
</tbody>
</table>

Appendix D
Care Transition Management Activities in Proposals Submitted to PTAC
Selected PTAC Proposals that Included Care Transition Management Activities

Nearly all of the proposals that have been submitted to PTAC addressed the potential impact on costs and care coordination, to some degree – including at least 20 proposals that addressed issues related to facilitating transitions and coordinating care across settings in PFPMs.

Broad or holistic focus
- American Academy of Family Physicians (AAFP)*
- American Academy of Hospice and Palliative Medicine (AAHPM)*
- American College of Physicians – National Committee for Quality Assurance (ACP-NCQA)*
- American Academy of Neurology (AAN)**
- The American College of Surgeons (ACS)*
- Coalition to Transform Advanced Care (C-TAC)*
- Dr. Sobel (Sobel)**
- University of Chicago Medicine (UChicago)*

Acute events or transitions involving hospitals
- American College of Emergency Physicians (ACEP)*
- American Society of Clinical Oncology (ASCO)*
- Avera Health (Avera)*
- Icahn School of Medicine at Mount Sinai (Mount Sinai)*
- Personalized Recovery Care (PRC)*

Transitions for specialty care populations
- Community Oncology Alliance (COA)**
- Innovative Oncology Business Solutions (IOBS)*
- Hackensack Meridian Health and Cota, Inc. (HMH/Cota)*
- Minnesota Birth Center (MBC)**
- New York City Department of Health and Mental Hygiene (NYC DOHMH)*
- Renal Physicians Association (RPA)*
- University of New Mexico Health Sciences Center (UNMHSC)*

* Sixteen proposals received a PTAC rating of “Meets” or “Meets and Deserves Priority Consideration” for Criterion 7, Integration and Care Coordination.
** Four proposals did not meet Criterion 7, but included components related to facilitating transitions and coordinating care across settings.
### Selected PTAC Proposals – Broad or Holistic Focus

</thead>
<tbody>
<tr>
<td><strong>1. AAFP</strong></td>
<td>Primary care</td>
<td>Primary care providers’ (PCPs’) patient panels</td>
<td>Broad focus; primary care medical homes work closely with patients’ other health care providers to coordinate and manage care transitions, referrals, and information exchange.</td>
</tr>
<tr>
<td><strong>2. AAHPM</strong></td>
<td>Serious illness and palliative care</td>
<td>Patients with serious illness</td>
<td>Broad focus; primary care teams (PCTs) develop a coordinated care plan with input from all of the patient’s physicians and providers, arrange for services from other providers, and maintain ongoing communication with other physicians and providers.</td>
</tr>
<tr>
<td><strong>3. AAN</strong></td>
<td>Neurology</td>
<td>Patients with headaches</td>
<td>Broad focus; the model is based on a strong internal and/or referral network of providers that involves multiple types of physicians, non-physicians, and other eligible professionals.</td>
</tr>
<tr>
<td><strong>4. ACP-NCQA</strong></td>
<td>Coordination between specialists and PCPs</td>
<td>Patients with multiple chronic conditions</td>
<td>Hospitals and other facilities; participants facilitate transitions and coordinate care across settings, and align resources with patient and population needs.</td>
</tr>
<tr>
<td><strong>5. ACS</strong></td>
<td>Cross-clinical focus</td>
<td>Broad (includes 100+ conditions or procedures)</td>
<td>Broad focus; model increases integration across specialties by grouping general and specialty surgeons who participate in a single episode of care, a selected set of procedural or condition episodes, or cumulative patient-level aggregations of all outcomes.</td>
</tr>
<tr>
<td><strong>6. C-TAC</strong></td>
<td>Serious illness and palliative care</td>
<td>Patients with serious illness</td>
<td>Broad focus; participants ensure that evidence-based treatments align with patient preferences and provide symptom management, 24/7 access to clinical support, comprehensive care planning, support for transitional and PAC, reliable handoff processes, and advance care planning.</td>
</tr>
<tr>
<td><strong>7. Sobel</strong></td>
<td>Broad/not specified</td>
<td>Broad/not specified</td>
<td>Broad focus; Regional Referral Centers (RRCs) can provide specialist expertise at any setting, reducing unnecessary transitions by leveraging telehealth to consult with specialists.</td>
</tr>
<tr>
<td><strong>8. UChicago</strong></td>
<td>Frequently hospitalized patients</td>
<td>Frail/complex patients with hospitalizations</td>
<td>Inpatient and ambulatory care; a single provider is responsible for seeing their patients in both inpatient and outpatient settings, including the patient home or rehabilitation settings.</td>
