Notes:

These rates measure enrollment of the single adult head who left TANF, except where noted as rate of leavers whose “children are covered” or where “anyone on case” (child or adult) is covered. As noted in Table 4A, measures of participation by month – denoted by (m) – are likely to be lower than measures of participation over a three-month quarter, and “month of exit” may mean first month without cash assistance or last month receiving cash assistance.

** The Washington and Missouri Medicaid enrollment rates are for all leavers, including two-parent leavers. In Washington, both adult recipients in a two-parent household are tracked as two, separate members; and such recipients account for 19.1 percent of adult recipients in Washington in cohort 97.4. The Missouri Medicaid enrollment numbers are higher than those reported previously; the state’s researchers recalculated the percentages in October 2000 to take into account Medicaid usage among families who returned to AFDC/TANF.
