### AHRQ's Vision

#### Goal

- A sustainable healthcare system that delivers high-value coordinated, integrated patient-centered care based in primary care optimizing individual and population health by preventing and effectively managing multiple chronic conditions (MCC).

# The Care and Learn Model

JGIM 2018

## Data Capacity for Patient-centered Outcomes Research through Creation of an electronic Care Plan for People with Multiple Chronic Conditions

Partnership AHRQ and NIDDK with multiple federal partners

- This project will build capacity for pragmatic, patient-centered outcomes research (PCOR) by developing an interoperable electronic (e)Care Plan to facilitate aggregation and sharing of critical patient-centered data across home, community, clinic and research settings.
- Designed to improve interoperability of data for research and care and addressing the challenge of missing critical patient information that compromises patient health and safety and ability to conduct research on people with multiple chronic conditions (MCC).
