Alzheimer's Association, BrightFocus Foundation, GHR Foundation, Ruth K. Broad Biomedical Research Foundation, Anonymous Foundation, Cure Alzheimer's Fund

DIAN Pharma Consortium: Abbvie, Amgen, AstraZeneca, Biogen, Eisai, Elan, Eli Lilly, Forum, Genentech, Hoffman La-Roche, Janssen AIP, Mithridion, Novartis Pharm AG, Pfizer, Sanofi-Aventis

DIAN-TU: Washington University and Dr. David Holtzman, Department Head of Neurology where the research is being conducted, may receive royalty income for an investigational drug called solanezumab, which was developed by Dr. Holtzman and licensed by Washington University to Eli Lilly & Company. Solanezumab is evaluated in this research.

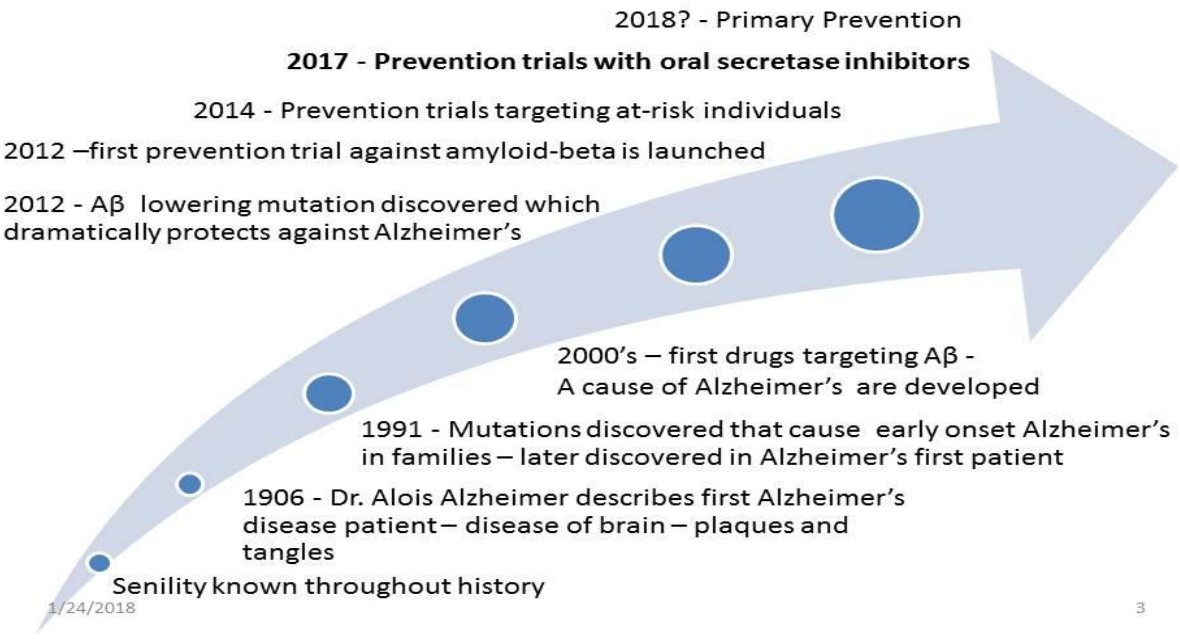
Companies: Co-founder C2N Diagnostics

Invited Speaker: BMS, FDA, Eli Lilly, Merck, Pfizer, Elan, Wyeth, Novartis, Abbott, Biogen, Takeda Foundation, Fidelity Biosciences Research Initiative, EMA

Editorial Board: Alzheimer's Research and Therapy, The Journal of Prevention of Alzheimer's Disease

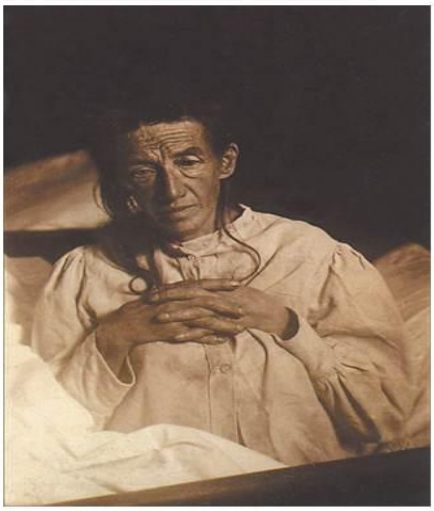
Consulting Relationships: Boehringer-Ingelheim, DZNE, Probiodrug AG, Medscape, Eisai, Forum (En Vivo) Scientific Advisory Board, Merck, Sanofi, Novartis, Roche, Global Alzheimer's Platform, IMI JU-Project EMIF

A brief history of Alzheimer's disease modifying prevention



Autosomal Dominant Alzheimer's Disease (ADAD)

- Less than 1% of AD cases result from autosomal dominant mutations in three genes directly involved in amyloid beta (Aβ) production
  - Amyloid precursor protein (*APP*)
  - Presenilin 1 (*PSEN1*)
  - Presenilin 2 (*PSEN2*)
- Auguste D., the first AD patient ever described by Alois Alzheimer, was later found to carry an ADAD mutation in presenilin 1 (F176L)



Comparison of Dominantly Inherited and Sporadic Alzheimer's Disease

	Dominantly Inherited AD	Sporadic AD
Clinical presentation	Amnestic	Amnestic
Cognitive deterioration	Memory, frontal/executive, generalized cognitive decline	Memory, frontal/executive, generalized cognitive decline
MRI	Hippocampal atrophy and whole brain atrophy	Hippocampal atrophy and whole brain atrophy
PiB PET	Cortex **plus basal ganglia**	Cortex
FDG PET	Parieto-occipital hypometabolism	Parieto-occipital hypometabolism
CSF Aβ 42	Decreased by 50%	Decreased by 50%
CSF tau	Increased by 2-fold	Increased by 2-fold

DIAN Observational: An International, Multi-Center Study

- Biomarker collection rate +80-90%
- >500 enrolled since 2008, 275 active participants, 52% 10 years or more prior to EYO
- 104 publications
- 16 presentations at 2017 AAIC, London, England
- DIAN resource requests to date:
  - Data (n=125) Tissue (n=43)
  - Data used to design and implement 3 arms in the DIAN-TU trial
- Planned Expansion: Korea, Spain, Canada
- Renewal submission in 2018 for funding 2019-2024
  - increased recruitment
  - Focus on molecular cause of Alzheimer's
  - Tau PET imaging
  - Harmonization of DIAN-TU and DIAN EXR

Through public/private support and partnership, the DIAN-TU has launched trials to provide advancement of treatments, scientific understanding and improvements in the approach to Alzheimer's disease drug developments.

DIAN Therapeutic Trials Rationale

- Clinical **onset of symptoms can be predicted at any point** in lifespan, allowing therapeutic trials years or even decades before the clinical onset.
- **DIAD has a clear cause of disease due to amyloid-beta: 'pure AD' without comorbid confounds**
- **Uniquely informative scientific information of disease progression, biomarkers and changes due to therapeutic treatments**
- **Common pathophysiology support general AD indication**
- Successful implementation of prevention and symptomatic studies will **inform as to the cause of AD and provide guidance for future therapeutic development**.

Total Registrants (15 Dec 2017)	1628
Total Family Registrants	1415
• DIAD Individuals	381
• At-Risk Individuals	365
Total Researcher Registrants	213

Exploratory Genetic Counseling and Testing Program *(as of Dec 2017)*	
Pedigrees Reviewed	147
Approved for testing	75
Positive for mutation on PS1, PS2, APP	45 (60%)
Pathogenic mutations	41 (91%)
Variants of uncertain significance	3 (7%)
Not Pathogenic	1 (2%)

DIAD Family Conference

- DIAD family networking opportunity
- Opportunity for DIAD families to have a dialogue with AD researchers, pharma, NIH and regulators
- Discussions:
  - Scientific, medical, regulatory, advocacy and disease burden matters
  - Support sessions specific to asymptomatic and symptomatic individuals, and family members
- Sponsored by the DIAN-TU, the Alzheimer's Association, and NIH (R13 AG 055232)

DIAD Family Conferences* to discuss scientific, medical, regulatory, advocacy and disease burden and also provide support sessions for asymptomatic and symptomatic individuals and their families

July 18th, 2015 AAIC, Washington, D.C. *Historic, first-time meeting of DIAD families*

- 99 DIAD individuals and family members attended

July 23rd, 2016 AAIC, Toronto, Ontario, *"Too Young to Forget"*

- 117 DIAD individuals and family members attended

July 15th, 2017 AAIC, London, United Kingdom, *"Key to the Cure"*

- 152 DIAD individuals and family members attended

*Funding for this conference was made possible in part by the Alzheimer's Association and by 1 R13 AG 055232–01, PI McDade, from the National Institute on Aging. The views expressed in written conference materials or publications and by speakers and moderators do not necessarily reflect the official policies of the Department of Health and Human Services; nor does mention by trade names, commercial practices, or organizations imply endorsement by the U.S. Government.

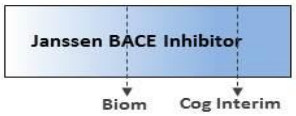
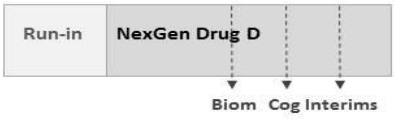
DIAN-TU Adaptive Prevention Trial

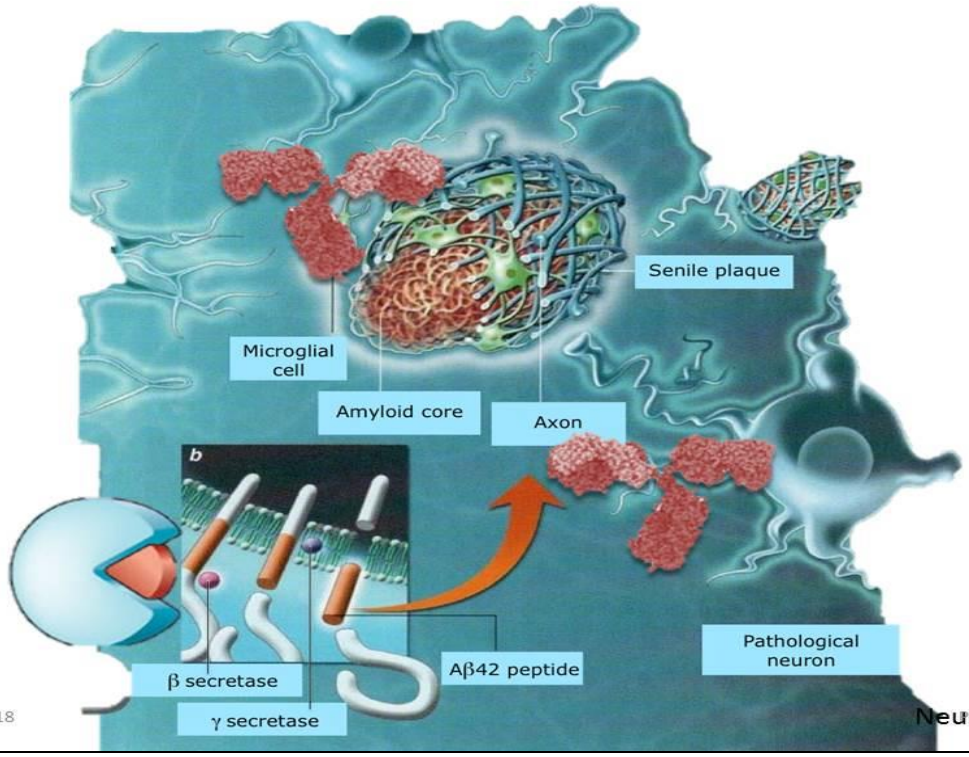
DIAN-TU NexGen:

- New drug arms
- 4 years of treatment
- Novel biomarkers
- Uses DIAD-specific Disease Progression Model based on DIAN Obs. data.
- Cognitive interim analysis
- Dose adjustment for maximal effect
- Home-based cognitive testing
- Population: with or at-risk for a DIAD mutation; -15 to +10 years of EYO; CDR 0, 0.5, 1



Alzheimer's Association
NIA R01/R56 AG053267
DIAN-TU Next Generation Prevention Trial





Making a Difference

- **Pioneering prevention studies** in DIAD utilizing observational data from DIAN, disease progression models, comprehensive biomarkers, input from participants and family members, and inclusive discussions with stakeholders.
  - *"It is really cutting edge, and it is the right thing to do – the trial, the observational study……"* Janet Woodcock, 2015 DIAD Family Conference, https://dian-tu.wustl.edu/en/2015-family-conference/
- **First trial in dominantly inherited AD and the first AD prevention trial using anti-amyloid drugs**
- Identification **of effective therapeutics** for DIAD with the goal of registration for DIAD and SAD patient use.
- Established foundation/groundwork and is a **model for multiple initiatives**: **AMP, IMI EPAD and GAP**
  - **FDA comment "exemplar of next generation trials"**
  - **Multi-drug arm DIAN-TU is ideal platform for testing combination treatments (e.g. anti-tau and anti-amyloid)**

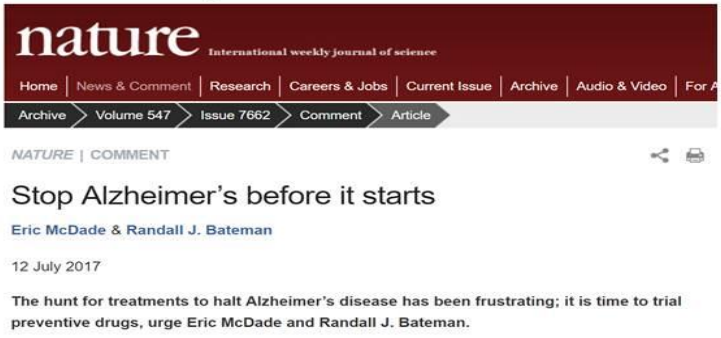
EYO Become Symptomatic (Delay in years from Natural Progression)		
% Change in Decline	Prop.	Time Slowing
0	-1 (0)	-1 (0)
30	2 (3)	5 (6)
50	4 (5)	14 (15)
70	8 (9)	33 (34)

Rationale for Primary Prevention

ADAD cause is known, pathophysiology clear, risk of disease certain, and predictability of onset is high. The ADAD families have very high unmet need.

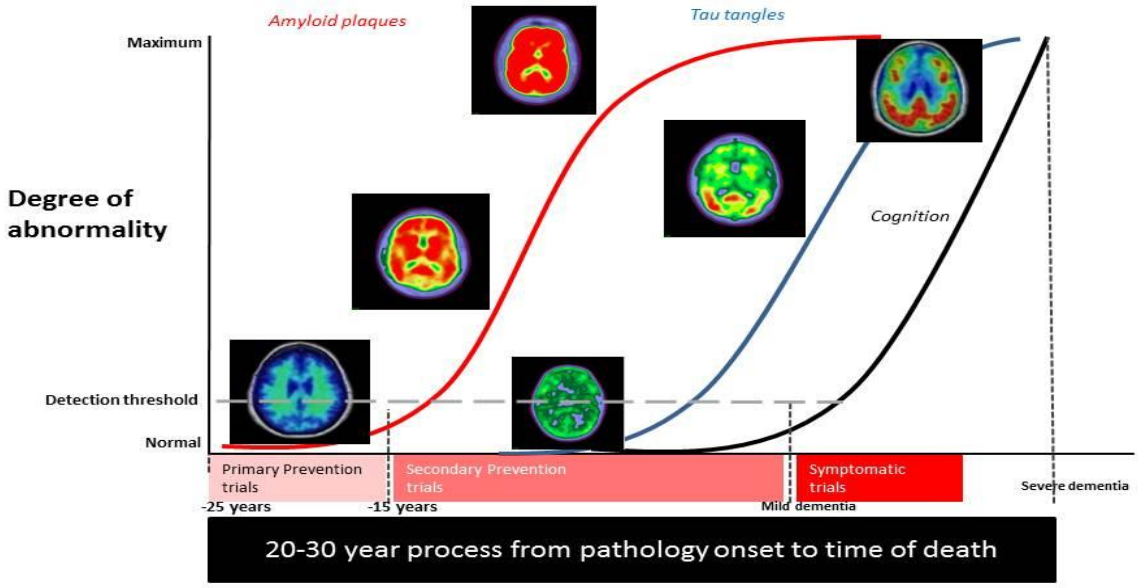


- Beta-secretase inhibitors and gamma-secretase modulators target molecular defect of ADAD mutations.
  - Evidence of safety, convenience, relative low cost to manufacture and well-tolerated
- The DIAN –TU has demonstrated the feasibility of conducting complex clinical trials of long duration in a the ADAD population.
- Strong support for primary prevention by participants, families, and AD researchers, with regulatory pathways being established.
  - Grant review scheduled January 25th

Dr. Eric McDade

McDade and Bateman, Nature 2017

How early to go? Primary Prevention and timing of AD prevention trials related to core pathology and symptom onset



25

DIAN-TU Milestones

- **2011:** DIAN-TU awarded grant **by the Alzheimer's Association** to launch trials
- **2011-2014: DIAN-TU Pharma Consortium (1st Term, 2011; 2nd Term, 2014)**: Pharma companies collaborating to develop dominantly inherited AD prevention trials (9 members)
- Multiple meetings with patient advocacy, academia, expert consultants, regulatory groups, DIAN participants and families, & Pharma partners to **develop advanced prevention AD trials**
- **26 therapies** nominated to date
- **2012: DIAN-TU Trial biomarker phase launched** with two treatments.
  - FDA approval for **first trial in dominantly inherited AD and the first AD prevention trial using anti-amyloid drugs**
  - Washington University serves as sponsor for the DIAN-TU trial
- **2013-2014:** DIAN-TU awarded **$6M and $26.7M NIA grants** to support the DIAN-TU Trials
- **2014: Trial protocol amended** to extend treatment to 4 years **for a cognitive endpoint registration trial**.
- **2014:** DIAN-TU awarded **funds from philanthropic foundations** to continue efforts
- Foundation/groundwork established to enable pioneering prevention studies in DIAD and associated sites: **Model for AMP, IMI EPAD and GAP. FDA comment "exemplar of next generation trials"**
- **2015:** Funds received for **DIAN-TU NexGen trial design** and DIAN-TU NexGen grant submitted
- **2016:** Received **Alzheimer's Association** grant to launch the **DIAN-TU NexGen drug arms**.
- **2016:** Received partial, **start-up funding from the NIA** to launch the **NexGen drug arms.**
- **2016:** Received foundation funds for **Primary Prevention trial design**.
- **2016:** Received foundation funds for **Ambulatory Research in Cognition (ARC) testing.**
- **2017:** Received full NIA funding for and launched the **NexGen (third) drug arm**.

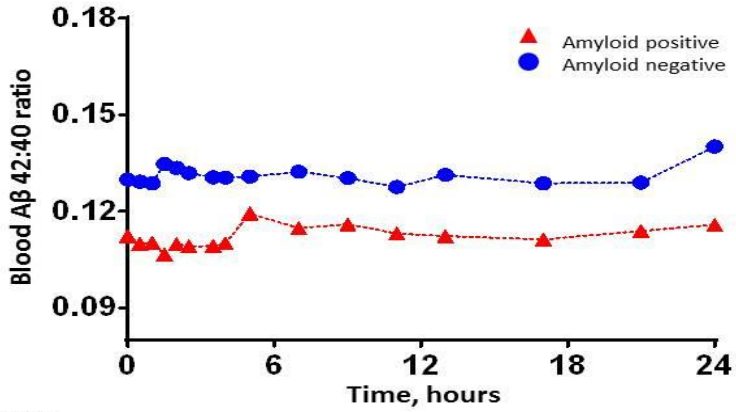
How to improve screening for prevention trials?

Blood test for amyloid plaques in the brain

Blood plasma β-amyloid 42/40 concentrations are consistently lower with Alzheimer's amyloid plaques, similar to cerebrospinal fluid.

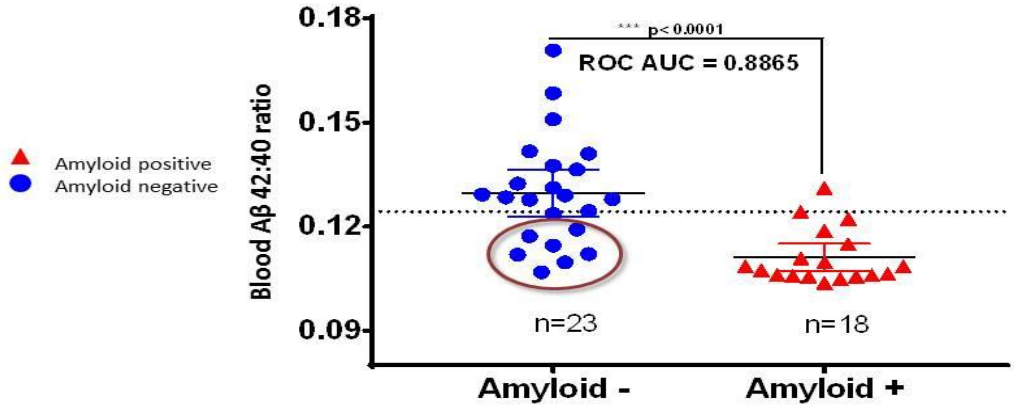


Washington University in St. Louis
School of Medicine

Ovod, Ramsey, et. al Alzheimer's & Dementia 2017

33

Plasma β-amyloid concentrations have sufficient specificity to be used as a potential screening test

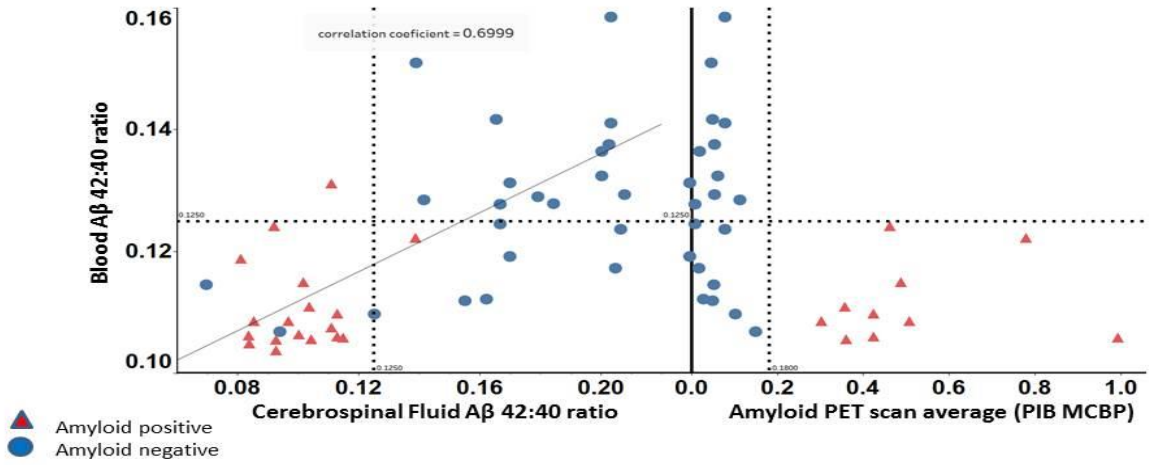


Washington University in St. Louis
School of Medicine

Ovod, Ramsey, et. al Alzheimer's & Dementia 2017

34

Plasma β-amyloid correlates with CSF and PIB PET β-amyloid

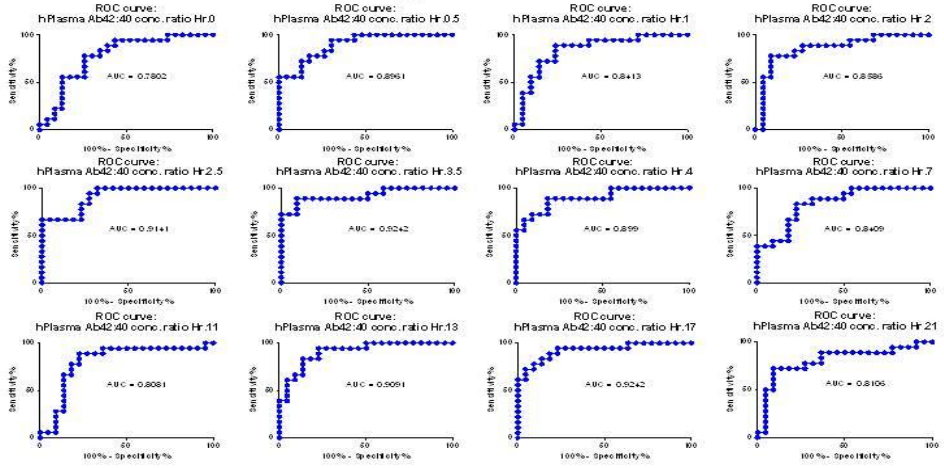


Washington University in St. Louis
School of Medicine

Ovod, Ramsey, et. al Alzheimer's & Dementia 2017

35

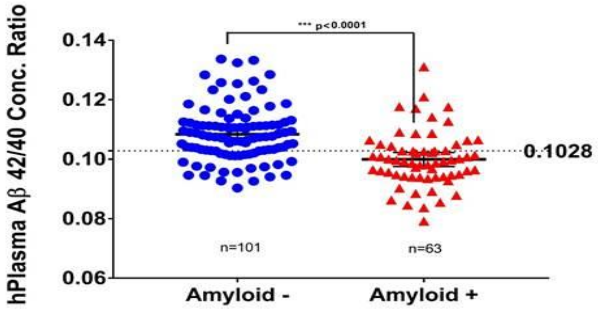
Receiver Operating Characteristic of Single Time Points is Accurate with Average AUC of 0.86

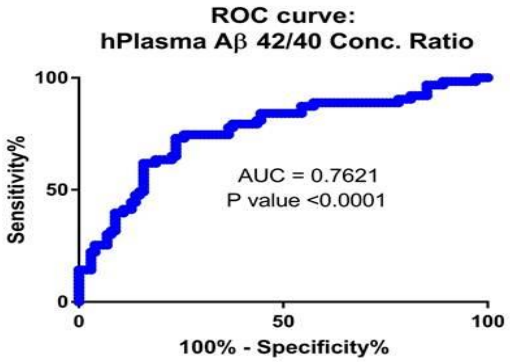


Ovod, Ramsey, et. al Alzheimer's & Dementia 2017

Washington University in St. Louis
School of Medicine

Second Validation Cohort from Knight ADRC plasma samples (p=6E-8)

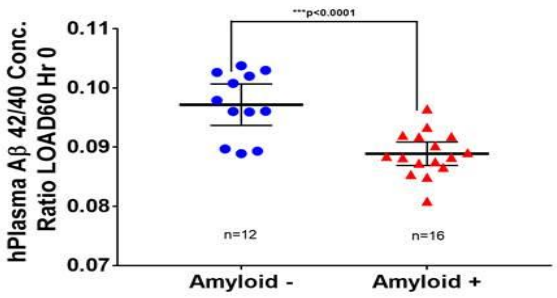


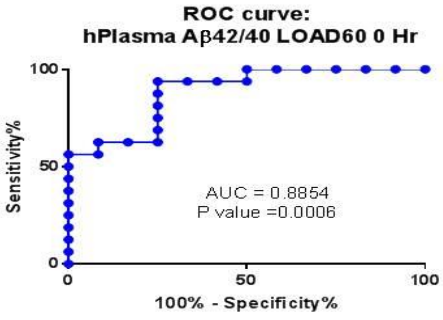


Washington University in St. Louis
School of Medicine

Knight ADRC

Third Validation Cohort from LOAD60 plasma samples





Washington University in St. Louis
School of Medicine

Knight ADRC

Blood plasma β-amyloid as a test for Alzheimer's disease plaques

- Were validated using longitudinal samples in a pre-specified (clinicaltrials.gov) prospective study.
- Are related to gold-standard measures of amyloid PET scans and cerebrospinal fluid β-amyloid for Alzheimer's disease amyloid plaques.
- The blood β-amyloid test can be used to detect Alzheimer's disease amyloid plaques in individuals before symptom onset.
- The blood β-amyloid test can accelerate ongoing and future clinical trials to speed drug discovery for Alzheimer's disease prevention and treatments.
- When effective drugs are found, the blood β-amyloid test can be used to screen millions of people in the general public to identify who is at risk for Alzheimer's disease and start treatments even before memory loss and brain damage begins.

Washington University in St. Louis
School of Medicine

January 26, 2018 -- Advisory Council Meeting #27

The meeting was held on Friday, January 26, 2018, in Washington, DC. The Research Subcommittee took charge of this meeting's theme, focusing on the process from targets to treatments. The Council heard speakers on the preclinical pipeline, the clinical trial pipeline, and the industry perspective. The meeting also included discussion of a driver diagram to guide the Council's future work, updates and a report from the October Care Summit, and federal workgroup updates. Material available from this meeting is listed below and is also available at https://aspe.hhs.gov/advisory-council-alzheimers-research-care-and-services-meetings#Jan2018.

Comments and questions, or alerts to broken links, should be sent to napa@hhs.gov.
